BOOKER GOLD EXPLORATIONS LTD. (BGE-V)

HEARNE HILL GOLD ASSAYS RECEIVED - Hugh Grenfal, president, reports Booker Gold Explorations Ltd. has received results from re-testing samples from trench 93-2 for native gold average. The trench is on the Hearne Hill property 65 km northeast of Smithers, B.C. Booker can earn a 100% interest, subject to a 4.5% NSR.. The grade has increased from 0.01 to 0.02 oz.gold/ton across 85 feet with an average of 2.3% copper. Booker also tested three typical five-foot sections from diamond drill hole 91-5. This section was tested to verify the necessity of running all samples at +100 mesh for accurate gold assays. The hole was in the Chapman zone; see assays below:

FOOTAGE	COPPER %	WEIGHT GRAMS	GOLD-100 OZ/TON	TOTAL GOLD OZ/TON
140-145	5.556	676	0.035	0.051
155-166	4.872	578	.018	.029
160-165	4.004	636	.020	.029

The above analyses were conducted by the fire assay method with the total gold assay taking into account the presence of free gold. Booker Gold is currently conducting a magnetometer and electromagnetic survey to delineate more breccia oipes. Drilling will follow the geophysical survey. (SEE GCNL NO.11, 18Jan94, P.3 FOR PREVIOUS PROJECT INFORMATION)
