NOTE: The grid squares provide a ready method of referring to or locating features. They are four miles to a side and subdivided into quarters by dotted lines. The east and west sides of the squares are not true north and south lines, but have a deflection to the east varying from 2° 23′ on the east side of the map to 1° 59′ on the west side. Any square is identified by the numbers along the outer border, for example: Benny Lake will be found in the northeast quarter of square 82-299.
