DRILL ASSAYS FROM MULTI-METAL - Victor Guinet, president
 PROSPECT NEAR TRAIL REPORTED of Golden Eye Minerals
 82F/3W 82FSW024 Ltd., announces assay re-
 sults from diamond drill hole 87-1 drilled to a depth of
 1250 feet on their Red Bird project, 20 miles east of
Trail, B.C. Mineralized intersections totalled 141 feet.
 Massive bands and stringers of stratabound pyrite and
 phalerite were intersected in 2 main zones at close to
 true widths. The first 3 intercepts in the table were
 in the Prospect Dolomite. The other was in Reeves Lime-

stone (Annex zone). Mr. Guinet says the intersections
 in the Prospect Dolomite and the anomalous germanium
 values warrant further investigation of this zone. The
 Annex zone was intersected about 500 feet down-plunge of
 previous intersections, indicating a substantial tonnage
 on Golden Eye property. The Annex zone is amenable to
 development by low cost sub-level blast hole stoping.

The success achieved in Hole 87-1 has enabled
 flow-through share funding at \$1 per share to be
 arranged for continued exploration of the project.
