
UNIT	LITHOLOGY DESCRIPTION
11	Rhyolite intrusive
10	Diorite / Gabbro intrusive
10b	Hanging Wall diorite } Bralorne Intrusives
10a	Footwall diorite } Bralorne Intrusives
6	Argillites, minor shale and limestone. Sandstone and conglomerate occur in lenses near base. Probably Hurley Formation.
5	White to light grey thinbedded highly folded chert.
4	Massive and quartzitic sulphides. Pyrite, chalcopyrite, minor sphalerite and galena.
3	Greenstone
2	Interbedded or interfolded greenstone and chert, includes possibly units 3 and 5. Units 2 to 5 may be equivalent to the Fergusson Group.

- Inferred geologic contact
- Inferred fault
- Area underlain by massive and quartzitic sulphides
- Vein zone
- Open area
- ● 112 Soil sample station

NOTES:

- DDH 85-02 is in approximately the same location as DDH 75-02.
- DDH locations with ? could not be located exactly.

Geological interpretation by R.S. Tolbert simplified from geological mapping by R.J. Morris.

Topography based on aerial photography flown July, 1986
