

## LEGEND

| | |
|---|---|
| GN | AMPHIBOLE GNEISS: Dark green, banded and foliated, fine- to medium-grained; dominantly plagioclase, hornblende and chlorite with local biotite. |
| QD | QUARTZ DIORITE: Medium grey, medium-grained and foliated. |
| QD1 | QUARTZ DIORITE: Light grey, medium-grained. Differs from the QD described above by being finer grained and non foliated. |
| QM | QUARTZ MONZONITE: Light grey, medium-grained. Weakly to moderately foliated. |
| MFDR | MAFIC DIORITE: Medium to dark grey, medium-grained, foliated diorite and quartz diorite containing up to 40% mafics, principally hornblende. Probably a contaminated phase of QD. |
| MTGB | METAGABBRO: Dark green, medium-grained, schistose, banded in places; contains up to 80% amphibole partly altered to chlorite. Includes amphibolite gneiss and chlorite schist. Occurs as small roof pendants in quartz monzonite. |
| AU IN PPB / AG IN PPM — ATTITUDE | Quartz vein in chlorite schist, generally less than 20 cm thick. Attitude and analytical data shown if available. |
| AU / AG — ATTITUDE | Quartz vein in chlorite schist exposed in pre 1987 trench. |
| AU / AG — R | Pre 1987 trench containing rubble of vein quartz but not exposing a quartz vein. |
| N | Local stockwork of small quartz veins not associated with chlorite schist; not known to contain mineralization. |
| ATTITUDE | Zone of chlorite schist or carbonate alteration; if shown with quartz vein attitude refers to vein. |
| | Pre 1987 prospect trench. |
| | Foliation, vertical. |
| | Foliation, inclined. |
| | Fault: position known, position assumed. |
| | Geological contact: position known, position assumed. |
| × × R | Small outcrop; Angular rubble. |
| | Area containing 25% or more outcrop. |
| | Outline of schist zone in the main showings. |
| AU PPB / AG PPM | Float of vein quartz. |
| × CSF | Float of chlorite schist. |
| | Baseline |
| | 100 metre grid stations. |
| 1550 | Contour line: contour interval 50 metres. |
| DH84-M1 | 1984 diamond drill hole. |
| | 1989 IP anomaly |
| | 1989 VLF conductor |
| | 1990 road and culvert |
| DH90-4 | 1990 diamond drill hole |
| | 1990 overburden trench |
| * | 1990 test pit |
| ⊗ | 1990 rock sample |
| | 1990 soil geochem grid |
| S700N | Drill hole section |
| SS | Subsurface chlorite schist zone intersected by drill hole |
