
GEOLOGICAL LEGEND

THUYA INTRUSIVE ROCKS

TRIASSIC OR JURASSIC

7	Quartz-monzonite, minor granodiorite. Predominantly [illegible] quartz.
6	Monzonite, quartz-monzonite. Less than 10% mafics, feldspar rich, local biotite, minor quartz.
5	Diorite, monzonite. Greater than 10% mafic minerals, commonly chloritized.
4	Gabbro, syenogabbro. Medium to coarse grained with alkali feldspars and local biotite.

NICOLA GROUP

TRIASSIC

3	Predominantly flows, minor volcaniclastics.
2	Black shales, argillites, minor limestone, sericitic phyllites.

ULTRAMAFIC ROCKS (AGE UNKNOWN)

1	Variably serpentinized dunites, pyroxenites, peridotes and gabbros. Relationship to Thuya intrusive rocks unclear.

SYMBOLS

- Small outcrop
- Outcrop
- Interpreted geological contact
- Dip and strike of foliation
- Dip and strike of bedding
- Lineation (with trend and plunge)
- Dominant jointing
- Interpreted fault
- Rock sample location
- Swamp
- Road
