PERCUSSION DRILL PROGRAM - A. Donald MacLeod, president of NCA Minerals Corp. has reported
RETURNED SOME GOOD GRADE that assay results have been received from a program of 18
TUNGSTEN ASSAY RESULTS percussion drill holes on the Gotcha tungsten property near
Clearwater, B.C. Assays ranged from 0.03% WO₃ in the hanging
wall (which was expected) to 4.3% WO₃ across 25 feet, which is considerably higher than
expected. Union Carbide estimated 1% WO₃ on the upper band and 1.9% in the lower band. The
preliminary tonnage estimate basically agrees with that of Union Carbide, 15,000 to 20,000
tons of ore grade material.
