Notes

A. A survey of mapping stations for the plan map was done by John Wilson and Herb McMaster assisted by Sims Associates, BCLS, of Qualicum Beach on Jan. 24, 1990. A MacMillan-Bloedell map at a scale of 1:5000 was also used to further plot the logging road detail.

Not all the drill hole collars, surface vein sample sites and adits plotted on the map were seen. Some sites were snow covered, others were covered by road building material and the upper adit had been blasted shut.

Positions of buried sample sites were located by Herb McMaster and surveyed. Positions of buried drill-hole collars were estimated.

In summary, drill collars not located, but estimated were for holes 1 and 8. Trenches covered by snow or road material were at S-5, S-12 and S-14

The position of the upper adit portal was based on an earlier Sims Associates survey.

B. SYMC also provided the following data:
- underground details of the upper adit
- sample intervals for drill core and chip sampling
- azimuths, dips, and depths of the drill holes
- assays

C. Elevations, in metres above sea level, are approximate and are provided by Sims Associates, BCLS.
