Private Placement . . . 500,000 shares at \$0.22 Mr Douglas Mason reports:

Further to the company's news release in the Stockwatch dated July 25 1989, the private placement announced therein has not been completed.

The company is currently negotiating with potential purchasers for the originally announced 500,000 shares at \$0.22 per share. Each share will have attached thereto a nontransferable share purchase warrant to purchase an additional share at \$0.25 per share in the first year and \$0.30 per share in the second.

There shall be no finder's fees applicable to this private placement which is subject to regulatory approval.

News Release . . . Goldwest to earn 51% interest in Pass Lake's Galore Creek property and 100% interest in Pup project

Pass Lake Resources Ltd (PLJ)

Shares issued: 2,173,339

from Pass Lake Resources by making cash payments totalling \$50,000, issuing 200,000 shares and incurring \$2.5 million in exploration expenditures by December 31 1991. For the Pup project, Goldwest will earn a 100% interest from Mr D. Caulfield by making cash payments totalling \$95,000, issuance of 200,000 shares and incurring \$1.0 million in exploration expenditures, subject to a 1.5% NSR in favour of Mr Caulfield,

The Pass Lake option project is comprised of 28 claims in seven claim groups, totalling 517 units, and the Pup project is comprised of six claims totalling 98 contiguous units. Exploration activity in the Galore Creek area in the past focused extensively on the area's copper potential following the discovery of the Galore Creek copper-gold porphyry in the late 1950's. The deposit, looated approximately three miles to the south of the Pup project, hosts reserves of 137 million tons grading 1.06% Cu and 0.014 oz/ton Au. Recently exploration emphasis has been towards gold exploration in the region following the success in the Iskut River area, approximately 40 miles to the southeast, and the discovery of several precious metal mineral deposits in the Galore Creek area. The Pavdirt deposit, lying midway between two of the Pass Lake option claim blocks, has reserves estimated to be 204,000 tons averaging 0.12 oz/ton Au. Work on the Trophy gold project by Continental Gold in 1987 and 1988 resulted in the discovery of 23 precious metal occurrences. A drill program of 9295 feet on the Ptarmigan zone returned an intersection grading 0.16 oz/ton Au and 0.88 oz/ton Ag over 36.4 feet. The Trophy gold project, now under option to Gigi Resources, adjoins the Pup project to the east.

Reconnaissance exploration on the JD claim group of the Pass Lake option project has returned grab sample assays up to 0.238 oz/ton Au from a shear zone in argillite, and three float samples of copper-bearing mineralization assayed up to 0.270 oz/ton Au and 6.25 oz/ton Ag. There has been little systematic exploration on the other claim groups of the Pass Lake option project. On the Pup project, reconnaissance geochemical sampling returned moderately anomalous gold, silver and copper results, the highest values being 1000 ppb Au, 16 ppm Ag and 10,000 ppm Cu.

Grid establishment, geochemical surveying and geological mapping has been recommended for the gold showings on the JD claim group. For the remainder of the Pass Lake claim groups and the Pup project, a program of geochemical sampling and prospecting will be carried out.

Consolidated Goldwest has contracted with Prime Explorations to operate both the Pass Lake option and the Pup project.
