--	--------

SUMMARY

Magnetic surveying over the Plenty mineral claim located an ultrabasic rock unit trending northwest across the northeast portion of the claim. Parallel trending ultrabasic rocks located about 1500 meters to the southwest are hosts for massive and disseminated chromite mineralization.

Vancouver, British Columbia

INTRODUCTION

During the period August 3 through August 28, 1978, a geophysical party under the direction of Mr. N. Rebalski, executed a magnetic survey over the Plenty mineral claim and located, cut and flagged a survey grid over the Host and Zip mineral claims.

The properties are located in southern British Columbia approximately 29 kilometers west of Kelowna in the Nicola Mining Division, at $50^{\circ}00'N - 119^{\circ}52'W$. A Scintrex MF-1 vertical force fluxgate magnetometer was employed for the survey.

The purpose of the survey was to locate magnetic responses arising from ultrabasic rocks which are potential hosts for chromite.

For the present survey, six lines oriented northeast - southwest and separated by 200 meters were cut across the Plenty mineral claim. Stations were occupied every 50 meters.

A total of 4100 meters of line length was surveyed.

Diurnal control was maintained by repeating stations at 30 minute intervals and by checking magnetograms from the Victoria Magnetic Observatory.

Grid lines oriented northeast-southwest were cut at 250 meter intervals across the Host and Zip mineral claims. Stations were flagged at 50 meter intervals. A total of 4000 meters of grid lines were cut.

CLAIMS

The following claims are on record at the Mining Recorders Office, Merritt, B.C. of the Nicola Mining Division.

<u>NAME</u>	<u>UNITS</u>	<u>RECORD No.</u>	<u>ANNIVERSARY DATE</u>
Host	2	288	July 18, 1978
Zip	3	289	July 18, 1978
Plenty	4	344	September, 1978

GEOLOGY

The area is underlain primarily by Paleozoic metasediments of the Cache Creek Group including greenstone, quartzite and limestones and pre-Cambrian sediments of the Chapperon group.

Serpentinized peridotite of the Old Dave intrusions extends across Nicola valley in a general north 25° west direction. Chromite, both as disseminations and as massive mineralized zones, is found in these rocks.

DISCUSSION OF RESULTS

PLENTY CLAIM:

Plate 1, on a scale of 1:5,000 shows the results of the magnetometer survey in contour form. The map is dominated by a narrow positive anomaly trending north 25° west across the north-eastern quarter of the claim group. The anomaly reaches a maximum of over 5000 gammas, indicating a very high magnetic susceptibility. The symmetry of the anomaly indicates that its source is a relatively narrow band of highly magnetic rocks extending near vertically to a depth of at least 300 meters.

The remainder of the claim is characterized by a relatively featureless magnetic field suggesting that intermediate to acidic type rocks underly these areas.

HOST AND ZIP CLAIMS :

Plate 1 shows the location of the grid that was cut and flagged over these claims.

CONCLUSIONS AND RECOMMENDATIONS

The magnetometer survey has clearly defined an area of ultra basic rocks in which could be found segregations of chromite. It is recommended that soil samples be taken across the area underlying the magnetic anomaly and checked for chromium. It is also recommended that a detailed gravity survey be conducted over the same area if the results of the geochemical surveys are positive.

Drilling and/or trenching would be dependent upon the results of this gravity survey.

Respectfully submitted,

Richard O. Crosby

RICHARD O. CROSBY, B.Sc., P.Eng.
Geophysicist

ASSESSMENT DETAILS

CLAIM : Plenty Mineral Claim
LOCATION : Kelowna Area, B.C.

CERTIFICATION

I, Richard O. Crosby, of the City of Vancouver, Province of British Columbia, hereby certify as follows:

1. I am a Consulting Geophysicist with offices at 422 - 510 West Hastings Street, Vancouver, B.C.
2. I am a registered Professional Engineer of British Columbia. I graduated from Washington State University in 1951.
3. I have practiced my profession for 25 years.
4. I have no interest, direct or indirect, in the mineral claims discussed in this report, nor do I expect to receive any.
5. I did not examine the permit area, but I am not aware of any claim conflict and believe that the data presented herein is reliable.
6. I consent to the use of this report in, or in connection with the prospectus, or in a statement of material facts relating to the raising of funds for this project.

DATED at VANCOUVER, BRITISH COLUMBIA, this 5th day of December, 1978.

A circular seal for a Professional Engineer of British Columbia. The outer ring contains the text "PROFESSIONAL ENGINEER OF BRITISH COLUMBIA". The inner circle contains the text "PROFESSIONAL ENGINEER OF BRITISH COLUMBIA". In the center, the name "RICHARD O. CROSBY" is printed, with "BRITISH COLUMBIA" below it. A handwritten signature of Richard O. Crosby is written across the seal.
