CAPSULE GEOLOGY

CAPSULE GEOLOGY The area is underlain by granitic rocks of the Middle Jurassic Okanagan Batholith. These vary from diorite to granodiorite, but are typically quartz diorite.

A 5200 square metre area of uranium enrichment occurs in surficial soils. A 3.0 metre thick layer, 1.5 metres below surface, averages 0.0232 % uranium, including a 0.5 metre thickness of 0.0729 % uranium (Culbert, 1979)
