CAPSULE GEOLOGY

CAPSULE GEOLOGY The area is underlain by granitic rocks of the Middle Jurassic Okanagan Batholith. These vary from diorite to granodiorite, but are typically quartz diorite.

A basin in the Trepanier Creek Valley has some moderately manganous soils. The area is 2800 square metres and an auger hole intersected 0.0133% manganese over 1.5 metres, 0.8 metres below surface. A 0.5 metre section assayed 0.022% manganese (Culbert, 1979)

WORK HISTORY

YEAR FROM	YEAR TO	WORK TYPE	AMOUNT (m/km/ha/No.)	COMMENT (Owner/Operator/Results)
1979		SAMP	2 auger holes	D.G. Leighton & Associates Ltd.
