MINE PRODUCTION NEAR - Charles M. O'Sullivan, president of Viscount Resources Ltd., has reported that the 1500-foot decline has now been completed at the O.B. Mine at Greenwood, B.C., in a joint venture with SKYLARK RESOURCES LTD. (SKR-V). Impressive silver/gold assays have been obtained from recent underground sampling at the mine. Samples taken from the 300-foot level ranged as high as 1137 ounces of silver per ton and 0.986 oz. gold/t. Underground exploration of the Serp gold zone has been initiated by driving a drift from the decline. The Serp zone was intersected by drill hole No. 13 which assayed 0.431 oz. gold/t over 13.5 feet. (SEE GCNL NO.185, P.3, 25Sep87. for recent results.)

Drill indicated tonnage is 3,000,000 oz. of silver and 10,000 oz. of gold. Commercial production is starting with plans initially to mill the ore at both the Roberts and Ainsworth Mills. This low cost high grade mine will be a very successful mining venture making Viscount a profitable precious metal producer and allowing for the consideration of dividends in the next fiscal year, he states.

VISCOUNT RESOURCES LTD. (VIS-V;VISRF-Nasdaq)

SKYLARK RESOURCES LTD. (SKR-V)

SILVER MINE AT GREENWOOD - Production is scheduled to start on 30 NOVEMBER 1987 at the equally owned O.B. silver mine of Viscount Resources Ltd. and Skylark Resources Ltd. at Greenwood, B.C. All mining facilities have been fully paid for. They are now in place. A mine manager and skilled mining crew have been hired to operate this high grade/low cost silver mine. Production of 100 tons a day will be milled at the Robert mill. Milling personnel are being assembled and mill start-up will start soon.

In reporting this, Viscount president Charles M. O'Sullivan stated that sampling on the newly opened lower levels of the mine has indicated an increase in the silver grade by about 50%. Sampling of a new raise connecting the first and second levels has returned values averaging 32 oz/ton silver and 0.08 oz/ton gold over a diluted width of 5 feet along a length of 103 feet. Drifting is continuing towards the Serpentine zone which was intersected by surface drill hole 13 and assayed 0.43 oz/ton gold over 13.5 feet.

The mine currently has 3,000,000 ounces of silver and 10,000 ounces of gold. Underground exploration in progress could increase known reserves. Mr. O'Sullivan says this high grade/low cost mine will be a very profitable mining venture which will allow for consideration of dividends in Viscount's next fiscal year.

News Release

82FSE011
Mr John Mirko reports:

S.W

Regulatory approval has been obtained on Skylark's agreement with Panax Incorporated whereby Skylark can earn a 60% interest in 136 mineral claims strategically located within the Calrin gold belt, Nevada. A program of grid line placement for control will commence on the property on October 19, 1987, to be followed by geologic, geochemical and geophysical surveying. A drilling program will then be designed and implemented as weather permits.

Sampling on the newly opened lower levels at the Skylark-OB mine near Greenwood, BC has indicated an increase of the silver grade by about 50%. Sampling of a new raise connecting the first and second levels has returned values averaged over a diluted width of 5 feet and along a length of 103 feet of 32 oz/ton silver and 0.08 oz/ton gold. The company's joint venture partner on this project in Viscount Resources Ltd.

An agreement has been signed with Granges Exploration Ltd., whereby the company can earn a 49% working interest in 6 mineral claims located in the Kay Lake area, near Puffy Lake, in Manitoba. The terms of the agreement call for exploration and development expenditures totalling \$500,000 by December 31, 1989. \$100,000 will be spent by December 31, 1987 and the balance is optional. The Kay Lake property has returned numerous significant gold values from trenches and diamond drill holes over a wide area. Values up to 3 oz/ton gold have been obtained.

SEPT 29/87 News Release

Mr Charles O'Sullivan reports: S.W.

The 1500 foot decline has now been completed at the Skylark/O.B. mine at Greenwood, BC. The development of this gold/silver deposit is a joint venture with Skylark Resources Ltd.

Gold/silver assays have been obtained from the underground sampling at the mine. The ore, taken from two 40 foot crosscuts off the decline at the 300 foot level, returned the following averaged values:

8255E 001011

H ZONE VEIN	WIDTH INCHES	AG OZ/TON	AU OZ/TON
No.3 crosscut North Face	23"	73.21	0.432
No.4 crosscut North Face	45"	11.47	0.039
No.4 crosscut South Face	51"	49.42	0.076
No.4 crosscut South Face, picked sample		1137.50	0.986

Underground exploration of the Serp gold zone has been initiated by driving a drift from the decline. The Serp gold zone was intersected by surface drill hole No. 13 which assayed .431 oz. gold/ton over 13.5 feet. The exploratory drift has now reached the Serp Gold zone.

News Release

Mr H H Shear reports:

The company has entered into an agreement, subject to approval by the regulatory authorities, with PIC Prospectors International Corporation to acquire a minimum 60% interest in 136 mineral claims strategically located in the Carlin, Nevada gold trend approximately 5 miles nw of the Dee Gold Mine and 11 miles nw of Newmont Mines Ltd. Calrin Gold camp and 4 miles se of the Cornucopia Resources Inanhoe deposit. The claims are surrounded on 4 sides by the American Barrick and Galactic/cornucopia deep joint venture properties. The property is also 6 miles nw of Newmont Mines Capstone deep discovery. The Carlin Trand comprises the largest proven gold belt in the western hemisphere. In excess of 20 million oz of gold are in known reserves along the Carlin Trend.

Exploration plans are being formulated and crews will be on the ground shortly.

Gold/silver assyas have been obtained from underground sampling on the Skylark/o.b. mine, at Greenwood, B.C. This is a joint venture with Viscount Resources Ltd. The ore, taken from two 40 foot crosscuts off the decline at the 300 foot level returned the following averaged values.

H ZONE VEIN

News Release

Mr Frank Kelly reports:

SKYLARK MINE 82ESE011

Mine development is progressing satisfactorily with the decline now down 1355 feet as of August 13, 1987. Four 40-foot cross cuts to the H zone have been completed with the last two crosscuts intersecting the H zone approximately 300 feet down dip from the surface. The H zone is observed to be strong and of good grade, with large amounts of ruby silver present. Sampling has been completed and assays will be available shortly

The decline should be completed by the beginning of September, following which raising and drifting will commence on both the H zone and the Serp gold zone.

Metallurgical work, mill testing and mill contracts have been completed and production from the H zone is planned to commence by late fall

Future exploration drifting and drilling will concentrate on delineating proven reserves on the H zone and developing the Serp zone. The possibility of further property acquisitions in the area is being investigated...

GCNL 15

22 JAN 87 SKYLARK RESOURCES LTD. (SKR-V)

ORE IS READY FOR MINING BUT AWAITS BETTER SILVER PRICE The first phase of underground development work has been successfully completed on their "H" zone silver-gold ore body near Greenwood, B.C., says president H.H. Shear, P.Eng. The work consists of 567 feet of decline, 265 feet of drifting and 403 feet of raising in three raises. Detailed channel sampling was done every 6 feet along the drift and raises.

This work has prepared for mining approximately 10,000 tons of ore grading 21.1 oz. silver/t and 0.08 oz. gold/t across a diluted width of 5 feet. Milling and metallurgical tests indicate recoveries are satisfactory.

Additional drilling on the "H" zone ore body has increased reserves to 86,500 drill-proven and 29,800 possible tons with an expected grade of 20 oz. silver/t and 0.08 oz. gold/t. There is still a good possibility of finding additional reserves on strike and down plunge to the northeast.

Drilling on the Serp zone returned erratic values so that tonnage calculations are not possible at this

time. One of the better reverse circulation holes drilled this past October returned 30 feet of 0.37 oz. gold/t, including 5 feet which ran 0.82 oz. gold/t.

Milling has been delayed at the Robert Mines mill until March 1987. The mill needs to be winterized and the work won't be done until next winter when it can be upgraded from cash flow. Skylark also awaits a better silver price.

Skylark is currently searching for major-sized mining projects. The company plans to raise capital with silver-backed investment instruments.

For the year ended 31 Aug 86, Skylark recorded a net loss from operations of \$132,551, raised \$996,505 by sale of shares, spent \$570,690 on exploration ending the fiscal year with working capital of \$502,214 including \$442,852 cash.

6 Apr 87 VISCOUNT RESOURCES LTD. (VIS-V; VISRF-Nasdaq) GCNL 67
FLOW-THROUGH FUNDS ARRANGED - Viscount Resources Ltd.

82 ESE 011

has reached agreement with NIM and Company, Limited Partnership - 1987 for a private placement of \$500,000 worth of Viscount tax flow-through shares at a premium above the market price on 27 Mar 87.

Of these funds, \$420,000 will be spent on underground exploration of the O.B. Silver deposit at Greenwood, B.C. The decline, completed to a depth of 567 feet in late 1986, is being extended to a depth of 1,200 feet. The extension began on April 1st and is expected to be completed by mid-June of this year. Development of the O.B. Deposit is a 50% joint venture with SKYLARK RESOURCES LTD. (SKR-V)

VISCOUNT RESOURCES LTD. (VIS-V, VISRF-Nasdaq)

Apr 30/87 SKYLARK RESOURCES LTD. (SKR-V) GCNL # 83

ADVANCE OF DECLINE TO 1200 FEET UNDERWAY - The decline ON O.B. SILVER DEPOSIT GREENWOOD, B.C. on the O.B.

82 ESE 011

silver deposit at Greenwood, B.C. was completed to 567 feet in late 1986 and has been prepared to be driven a further 630 feet to a depth of 1,200 feet. The extended decline will access the south end of the H orebody. In

conjunction with completing the decline, 450 feet of slusher drifting and 507 feet of raising various slusher stations, manways and draw points will take place. Completion is scheduled for early July 1987. Production of the orebody will begin once the present underground exploration work is completed. The underground development is expected to increase the already known orebody containing approximately 3,000,000 oz. silver.

During April 1987, a dry was built at the mine, a shop and compressor house were built, office and warehouse erected, a high voltage power line installed and a waste disposal area cleared. Underground, the preparation was done to break through the ventilation raise and tigger hoist raise.

SKYLARK RESOURCES LTD. (SKR-V)

UNDERGROUND DECLINE ADIT COMPLETED - H.H. Shear,
IN SILVER-GOLD MINE AT GREENWOOD president of
Skylark (BZESE011) Skylark Resources

Ltd. and C.N.O. Sullivan, president of Viscount Resources Ltd., announce that, on their 50-50 joint venture property at Greenwood, B.C., the underground decline on the 'H' zone is now completed. The decline is 585 feet long, 11 1/2 feet wide, 9 feet high and has a slope of 15%. A crosscut 30 feet from the decline, boxhole and manway has also been completed. About 180 feet of the planned 240 feet of drifting on the vein and 50 feet of the first 6-foot by 6-foot raise to surface have been completed. Three raises, each about 150 ft. long, are planned. The vein, over a length of 67 feet and a diluted width of 5 feet, assayed an average of 21.54 oz. silver/t and 0.079 oz. gold/t. Assays range up to 235 oz. silver and 0.935 oz. gold/t. Native and ruby silver are visible in the ore at numerous locations on the veins.

Some 1,000 tons of development ore are being stockpiled. A 35-ton test sample of development ore has been sent to the Robert Mine mill. Extensive assaying is now in progress on various internal products and concentrates. It is estimated that the initial underground development work will be completed by the end of October. Messrs Shear and Sullivan expect custom milling of the ore to start at an early date.

SKR-86-32	397.5-398.5	1.0	0.337	15.11

DECLINE-RAMP STARTED IN - H.H. Shear, P.Eng., president GREENWOOD GOLD CAMP, B.C. announces that Skylark

Resources Ltd. has started the underground program on their wholly owned Skylark-OB property near Greenwood, B.C. The 15% decline-ramp is down 100 feet, 30 feet of timbering have been completed on either side of the actual portal face and the decline is underground 18 feet. The initial underground program will consist of 550 feet of decline in the footwall below the H zone and will also include at least 250 feet of drifting and 130 feet of raising on the H zone vein.

Skylark has completed 3 more diamond drill holes down dip from Hole SPN-86-1 on the "Ser" zone. Holes SPN-86-4, 5 and 6 intersect that zone 200, 400 and 600 feet down dip from SPN-86-1. Extensive submarginal gold-silver values were cut in these holes with the intersections of economic interest shown in the table. The section reported in SPN-6 contains a 1-inch structure with 1/4 inch of disseminated pyrite and free gold, the first visible free gold observed on the property.

Skylark has completed 3 diamond drill holes down dip from SKR-86-28. SKR-86-31, 32, and 33 were drilled to intersect the H zone at 150-foot intervals down dip from 28, and some 300 feet on strike NE from SKR-85-17 and 18. Hole 31 cut 4.2 feet of the H zone, 3 feet of core were lost but 8 inches of gouge were recovered, see table, and indicated an economic intersection was encountered. Assays are awaited for Hole 33 and additional assays from SPN-86-5 and 6 and SKR-86-31 and 32 are being completed. Hole SKR-86-31 appears to have extended the lower economic portion of the H zone by 300 feet.

N. MINER AUG 18/86 Skylark Resources starts underground

An underground exploration and development program has commenced at Skylark Resources' OB property near Greenwood, B.C. The project falls under a joint venture agreement with Viscount Resources. BZESE011

The ramp is scheduled to go down some 550 ft in the footwall below the H zone which is still open at depth. At least 250 ft of drifting and 130 ft of raising are planned in the zone. Initial production from the deposit is expected in late September, the joint venture says.

Meanwhile, Skylark has completed three more holes in the Serp zone on its 100%-owned property nearby. Submarginal gold/silver values were encountered including some free gold. The widths ranged from one foot to 4.5 ft and gold values from 0.045 oz in the latter intercept to 1.8 oz across the former.

N. MINER AUG 18/86 Viscount driving ramp at Greenwood project

An underground exploration program has started on the Greenwood, B.C., gold property held by Viscount Resources. The initial program will consist of 550 ft of decline ramp, 250 ft of drifting and 130 ft of raising on the H zone vein.

Although drilling to the southeast failed to extend the zone, additional work is testing for extensions at depth, Viscount says. Initial production from the zone is scheduled to start by late September.

At the company's gold project near the Lupin mine in the N. joint venture partner Bow V Industries says diamond drilling start this month. BZESE011

N. MINER 13 OCT 1986 Viscount moves ahead on underground work

Reporting progress on their Greenwood, B.C. gold property, Viscount Resources and Skylark Resources say they have completed a 585-ft underground decline on the H zone orebody.

Also completed are a crosscut measuring 30 ft from the decline, boxhole and manway, and about 180 ft of a planned 240 ft of drifting on the vein and 50 ft of the first raise to surface. Three raises are planned, each 150 ft long.

The companies say about 1,000 tons of development ore are being stockpiled, and that a 35-ton test sample of development ore has been sent to the Roberts mine mill.

Over a length of 67 ft and a diluted width of 5 ft, the vein assayed an average of 21.54 oz silver and 0.079 oz gold per ton. Assays range up to 235 oz silver and 0.935 oz gold, they report. BZESE011

Initial underground development work is expected to be completed by the end of this month.

DRILLING YIELDS ENCOURAGING - Diamond drilling has been RESULTS FROM GREENWOOD, B.C. underway on the OB property, a 50-50 project of Skylark Resources Ltd. and Viscount Resources Ltd., 2 km east of Greenwood, B.C., since 21 May 86. In this program, the Serpentine zone has been traced by 2 drill holes 600 feet to the south on the OB claim, from a group of 7 holes drilled on it in 1985. Anomalous gold and silver values in all holes suggest interesting potential. The two holes, SPS-86-1 and 2, cut about 35 to 40 feet of rehealed fault zone which included values shown in the table.

Drilling of two holes to the southwest on the "H" Zone suggests that the ore zone has been delineated in that direction. However, hole SKR-86-24 drilled through to the Serpentine Zone some 200 feet up-dip from previous drill holes yielded the gold and silver values shown in the table plus 2.68% lead and 8.67% zinc in the narrower section shown.

In reporting this, director Frank P. Kelly says, "Most encouraging is that drilling to the northeast on the "H" Zone on Skylark's wholly owned property has intersected ore grade values above holes SKR-85-6 and 7. Hole 7, drilled in 1985, was submarginal. The values returned in SKR-86-25 and 26, which intersected the "H" zone above SKR-85-6 and 7, respectively, are shown in the table.

Mr. Kelly comments, "The above results and current additional drill holes suggest that the submarginal values cut in holes SKR-85-7 and 9 may only be a localized low grade section on the "H" Zone vein. Continued drilling to the northeast could result in a dramatic increase in the ore reserves contained in the "H" zone."

MORE DRILL RESULTS REPORTED FROM - H. Herbert Shear, president of Skylark Resources Ltd., reports that diamond drilling continues on the Skylark-OB property near Greenwood, B.C. The latest results are from Skylark's wholly owned portion of the property. Drilling northeast along the "H" zone has extended the ore zone an additional 100 feet to above SKR-85-9, which was drilled in 1985 and was sub-marginal. SKR-86-27 intersected the "H" zone about 90 feet up dip from SKR-86-9 and returned 5.0 feet from 82 feet to 87 feet grading 15.25 ounces of silver and 0.062 ounce of gold per ton. This section includes 28 inches grading 32.40 oz. silver and 0.132 oz. gold/t. Holes SKR-86-28 and 29 were drilled 200 feet and 400 feet NE of SKR-86-27. The "H" zone was intersected in both holes and returned sub-marginal values.

Drilling north along the Serp. zone in holes SPN-86-1 and 2 returned the values shown in the table. The two holes are located about 200 feet and 400 feet north of holes SKR-85-19, 20, 21 and 22 which were drilled through the Serp. zone in 1985. The assays in the table are the best sections. Lower grade values have been returned between these sections and additional splitting and assaying are in progress. Management are evaluating the significance of these 2 holes.

GCNL #126 2 JULY 1986 82E5E011
VISCOUNT RESOURCES LTD. (VIS-V)
SKYLARK RESOURCES LTD. (SKR-V) (2E)
UNDERGROUND PROGRAM - Viscount Resources Ltd. 50% and TO START BY MID-JULY Skylark Resources Ltd. 50% have reported exploration of the "H" zone orebody and the new "Serp" zone is continuing on the property located 2 miles east of Greenwood, B.C.

Sufficient drilling has now been completed on the H zone to warrant underground exploration. The plan calls for a 550 foot long decline at 15% and a scraper subdrift along the H zone to open up the top 100 feet of the vein. This initial work will supply clean bulk samples for metallurgical testing, and will aid in more accurate grade calculations. The ore grade portion of the top of the H zone has now been traced by diamond drilling for a strike length of 700 feet and is open to extension down plunge to the northeast.

The current estimated tonnage and grade are 75,000 tons grading 18.26 oz. silver/ton and 0.10 oz. gold/ton. Drilling since these figures were calculated has expanded reserves moderately. Contained silver equivalents now exceed 2,000,000 ounces. The underground work is expected to commence by mid July. Government permits have been received.

Four holes have recently been drilled in the Serp zone, which strikes N 25 W and dips 30 degrees east. SKR-86-24 on the south end, 200 feet south into the OB claim. Holes SPN-86-1, 2 and 3 lie approximately 250, 480 and 780 ft. respectively north of SKR-86-24. SKR-86-24 had an unusually high lead-zinc section not yet encountered in other holes.

Two previously reported holes, SPS-86-1 and 2, returned submarginal gold silver values in the Serp zone 220 and 480 ft. south of the SKR-86-24 respectively. Two additional step out holes, SPS-86-3 and 4 have been completed to the south of SPS-86-2. They intersected the zone but results were negative. The zone has now been traced along a strike length of 1600 ft. with the north 800 ft. returning promising values. (SEE TABLE OVERLEAF THIS PAGE).

The Serp zone will be accessible from the decline on the H zone. (See GCNL NO. 113, P.1, June 12, 1986).

NEW DRILLING GIVES FIRST LARGE TONNAGE INDICATION
Data from drilling the serpentized fault zone on the OB property, about 1.5 miles east of Greenwood, B.C., have been compiled. This zone strikes N25 degrees W, dips 30 degrees east and lies near the NW corner of the OB claim. Holes 12, 13 and 14 did not drill through the zone. Holes 19 to 22 were drilled through the zone and around hole 13 which had an intersection of 13.5 feet assaying 0.431 oz.gold/t and 1.63 oz.silver/t. Holes 12, 13, 19, 20, 21 and 22 are located within a 150 by 150-foot panel on the zone. Hole 14 is 250 feet down dip from this. Viscount president Charles N.O.

Sullivan and Skylark president H. Herbert Shear, P.Eng., say the serpentine zone, a blind occurrence discovered in drilling the "H" silver deposit, is the first indication on the property that a large tonnage potential is present. An indication of better grades encountered in the very limited area drilled to date can be gained from averaging the better sections from contiguous holes 13, 19, 21 and 22. These sections average 8.8 feet wide with 0.185 oz.gold/t and 1.24 oz.silver/t. A large drilling program is planned on this zone in early 1986.

GCNL #59 25 MARCH 1986

82E/2E (082ESE011)

SKYLARK RESOURCES LTD. (SKR-V) has received Vancouver Stock Exchange approval for exercise of an option to acquire a 50% interest in the O.B. claim in Greenwood mining division, B.C., from Viscount Resources Ltd. for spending \$100,000 on the property by 1 Jul 86 (expended) and the payment of \$10,000 to Viscount Resources (paid).

GCNL #64 3 APR 1986

VISCOUNT RESOURCES LTD. (VIS-V;VISRF-Nasdaq) 82E/2E (082ESE011) SKYLARK RESOURCES LTD. (SKR-V)

UNDERGROUND PROGRAM PLANNED - Adtec Mining Consultants Incorporated have been retained by the Viscount and Skylark FOR GREENWOOD SILVER PROJECT 50/50 joint venture to design the underground exploration and development plan for the H Zone, located 1.5 miles east of Greenwood, B.C.. Lawrence Olsen has been employed as project and mine manager. He was for some years mine superintendent at the Silvana Mine in Slocan, B.C.

An agreement has been signed with Robert Mines Ltd. to mill the first 10,000 tons at their mill near Greenwood. Timing on the start of mining depends on the completion of the underground work and obtaining the necessary permits.

A final decision as to the type of main entry is still pending. While a horizontal crosscut is preferable, deep overburden has been found to occur at the proposed portal site. Within the last two weeks, 1200 ft. of roads, backhoe pits, 3 tricone drill holes and 4 seismic lines totalling 1500 ft. have been completed. Using this information a decision will be made as to the type and location of the main entry with the choices being horizontal crosscut, decline or an inclined shaft.

Within the first planned phase will be 600 ft. of drifting on the vein once the main entry is completed. (See GCNL NO.11, Jan.16, 1986, P.1 for property reviewed)

In July 1985, the companies reported ore reserve estimates between 50,000 and 70,000 tons grading 20.19 oz.silver/t, 0.08 oz.gold/t containing approximately 2,000,000 oz of recoverable silver. More recent drilling has indicated a larger tonnage potential for the property. A new drilling program is to test this larger tonnage potential.

Viscount has been notified by Bow Valley Industries Ltd. that the 1986 exploration program will begin shortly on Viscount's gold property consisting of 5140 acres in the vicinity of Echo Bay Mines Ltd., Lupin Gold Mine, 250 miles North of Yellowknife, N.W.T. Bow Valley can earn a 51% interest in the property by spending \$1,000,000 on exploration and reimbursing Viscount all costs to date.

With the recent sale of 400,000 shares at \$1.50 through Jones Gable & Co. Ltd., Viscount has no debt and has approximately \$600,000 working capital to continue projects.

VISCOUNT RESOURCES LTD. (VIS-V, VISRF-Nasdaq)

SKYLARK RESOURCES LTD. (SKR-V)

DRILLING CUTS ORE GRADE - Drilling near the NE corner of the O.B. claim, 1 mile east of Greenwood, B.C., intersected **SILVER NEAR GREENWOOD, B.C.** ore grade values beneath showings trenched in 1983 and 1985. Hole E.O.B. 85-3 from 153 feet 3 inches to 162 feet in the hole averaged 16.42 ounces of silver and 0.007 oz. gold per ton. This intersection includes 9 inches of 182.3 oz. silver and 0.035 oz. gold/t. The intersection represents a width of 5 feet. Holes E.O.B. 85-1, 2, 3 and 4 were drilled at 100-foot intervals along a new silver zone traced by surface trenching for 100 feet. One trench exposed a 24-inch wide zone which assayed 40 oz. silver/t. Hole E.O.B. 85-3 cut the zone 100 feet below surface and 100 feet south of the most southerly showing. The other holes did not intersect mineralization; management attributes this to intense faulting. Trenching and diamond drilling will be initiated shortly. Hole SKR 85-22 drilled on the H zone silver/gold deposit intersected very high grade silver values from 106 ft. 8 in. to 115 ft. 8 in., a true width of 5 feet. The zone averages 31.96 oz. silver and 0.022 oz. gold/t and includes 8 inches of 423.5 oz. silver/t. Hole SKR 85-22 cut the H zone 80 feet up-dip and 25 feet SW of Hole SKR 85-11 which assayed 33.55 oz/silver and 0.078 oz/gold/T over 5 feet.

NOVEMBER 1985*

**Viscount Resources Ltd. VSE-VIS
Skylark Resources Ltd. VSE-SKR**

The joint venturers report that three diamond drill holes have now intersected the new gold zone on the property near Greenwood, B.C. As drilling continued on the "H" silver zone, holes 12, 13 and 14 drilled through the silver zone into serpentine where significant gold values have been encountered adjacent to the contact within the serpentine. This constitutes an entirely new situation with this discovery. Hole 12 cut 1.5 feet of 0.123 ounce gold, hole 13 cut 13.5 feet of 0.431 ounce gold and hole 14 cut two feet of 0.115 ounces of gold per ton. The holes intersected the gold zone down dip over a distance of 400 feet. Additional drilling is planned along strike in the vicinity of hole 13 and will also continue on the silver zone. More detailed exploration is planned along the serpentine contact.

ASSAYS REPORTED FROM

THREE GOLD INTERSECTIONS

82E/2E (082ESE011)

Three diamond drill holes have now intersected the new gold zone on the Skylark - O.B. property near Greenwood, B.C. in continuing the drilling to the southwest on the "H" zone silver deposit, holes 12, 13 and 14 drilled through the silver zone and into serpentine.

Significant gold values have been encountered adjacent to the contact within the serpentine, constituting an entirely new situation and new discovery. The holes intersected the gold zone down dip over a distance of 400 ft.

Serpentine outcroppings on the Skylark - O.B. property north and south of the "H" zone area, indicate a potential strike length of 7000 ft. along this promising contact structure. Anomalous gold values in soil samples occur in numerous locations along the southern portion of its length. There is a history of serpentine related gold deposits in the Greenwood area.

Additional drilling is planned along strike in the vicinity of hole 13 and will also continue on the silver zone. More detailed exploration is planned along the serpentine contact. (SEE GCNL NO.161 P.1, AUG. 21, 1985).

N MINER
23 SEPT 1985

Skylark drilling hits new zone

Additional drilling has returned encouraging results from a new discovery being examined by Skylark Resources on its O.B. gold property in the Greenwood area of B.C.

Drilling southwest of the H zone silver deposit returned encouraging gold values in a new zone. Skylark reports. Hole 12 intersected a 1½-ft. section grading 0.123 oz. gold per ton and hole 13 cut a 13½-ft. section assaying 0.431 oz. gold per ton. Hole 14 returned a 2-ft. section grading 0.115 oz. gold per ton.

The potential strike length of the new zone is 7,000 ft. along a serpentine contact. Geochemical surveys have also outlined several anomalous areas in soils along the southern section of the serpentine contact zone.

Skylark reports that additional drilling is planned for both the new zone and silver zone.

82E/2E (082ESE011)

GCNL #191 3 OCT 1985

GCNL #150 6 AUG 85

VISCOUNT RESOURCES LTD. (VIS-V, VISRF-Nasdaq)

DIAMOND DRILL TESTING OF ANOMALOUS TARGETS STARTED - Charles N. O'Sullivan, B.Sc., president of Viscount Resources Ltd. AUG.1 BY BOW VALLEY ON CONTWOYTO LAKE GOLD PROJECT has reported that Bow Valley Industries Ltd. started a diamond drill test Aug.1,1985 on the Viscount Resources property 10 miles south of the Lupin mine, at Contwoyto Lake, north of Yellowknife, N.W.T.(See location map overleaf page two)

The target has been located by electromagnetic and magnetometer surveys, prospecting, geological mapping and surface sampling. The iron formation marker horizon has been exposed on surface for 600 meters, averaging 10 meters wide. A high grade sample assayed 8.35 oz.gold/t from surface. The similar light to dark green banded silicious rusty mineralized folded complex which hosts the Lupin mine appears to strike across a portion of the Viscount property. The structure plunges to the west and dips nearly vertically as at the Lupin. The electromagnetic anomaly yielded readings 50 times background. Mineralization has been located on both sides of a dike and the drilling is planned to test each of these targets.

Mr.O'Sullivan pointed out that the area is "heating up" since a number of major mining companies are active there, including, Hecla, Brinco, Cominco, Echo Bay as well as Bow Valley.

Bow Valley can earn a 51% interest in the property by spending \$1,000,000 on exploration over the next few years and reimbursing Viscount all costs to date.

Viscount retains a minimum 50% interest in the OB property, 1.5 miles east of Greenwood,B.C. where a second phase of drilling, a minimum of 15 holes, is to start shortly to extend the high grade silver zone discovered recently. (See GCNL No. 133 ,p 1 for detail)

82E/2E (082E5E011)

GCNL #156 14 AUG 85

VISCOUNT RESOURCES LTD. (VIS-V)

DRILL PROGRAM STARTED - David Hudson, a director of Viscount Resources Ltd., announces that a diamond drilling program has started on the OB mineral claims one mile east of Greenwood, B.C. Diamond drill holes No.12 and No.13 have been completed with both holes intersecting the zone of mineralization. One of the holes extended the strike length of the deposit while the other extended the depth. Assay results will be released as soon as they become available.

Mr. Hudson says the drilling is a continuation of that already completed on the new silver/gold "H" ore deposit discovered in 1984. Skylark Resources Ltd. have an option to earn 50% interest in the property.

NMINEY 18 JULY 85

Viscount discovers high grade silver

Viscount Resources says a new silver-gold zone has been discovered on its OB mineral claim one mile east of Greenwood, B.C. Skylark Resources can earn a 50% interest in the prospect. Ten holes have been drilled and each of them intersected the zone. Stripping has proven the mineralization is continuous and a magnetometer survey indicates the zone could have a strike length of 1,000 ft.

82E/2E
(082E5E011)

Some good intercepts included: 5 ft. grading 33.55 oz. silver and 0.078 oz. gold; 5 ft. averaging 26.4 oz. silver and 0.11 oz. gold; 5 ft. grading 18.3 oz. silver and 0.155 oz. gold and 5 ft. of 17.99 oz. silver and 0.081 oz. gold. Native silver has been noted in some holes and surface assays have reached as high as 501 oz. silver per ton and 0.93 oz. gold. The deposit occurs in a strong, continuously mineralized fault zone which is open along strike and to depth, says Viscount.

GCNL #146 30 JULY 85

SKYLARK RESOURCES LTD. (SKR-V)

82E/2E (082E5E011)

DIAMOND DRILLING RESUMING ON - Skylark Resources Ltd. will start a diamond drilling program on their Skylark-OB GREENWOOD SILVER-GOLD PROJECT property 2 km east of Greenwood, B.C. on 1 Aug 85. Announcing this, president H.H. Shear, P.Eng., says this will continue the drilling completed on the new silver-gold "H" ore deposit discovery in 1984. The first hole will be a 100-foot step-out southwest of hole 85-11 which is on the southwest end of the completed diamond holes.

The deposit has been traced for 500-feet of strike length and 300 feet down dip by drilling and averages 20 ounces of silver and 0.08 ounce of gold per ton across an averaged minimum mining width of 5 feet.

Hole 85-11 returned the best results of the holes so far completed in the zone, assaying 64.47 oz. silver and 0.149 oz. gold/t across 2.58 feet or 33.55 oz. silver and 0.078 oz. gold/t across 5 feet.

GCNL #148 1 AUG 85

VISCOUNT RESOURCES LTD. (VIS-V)

82E/2E (082E5E011)

DIAMOND DRILLING TO RESUME - Viscount Resources Ltd. has announced diamond drilling will resume on August 1, 1985 on the OB mineral claim located approximately one mile east of Greenwood, B.C. SKYLARK RESOURCES LTD. (SKR-V) can earn a 50% interest in the property. The holes will further test the new silver-gold "H" ore deposit discovered in 1984. The first hole will be a 100 ft. step-out southwest of hole 85-11 which is on the southwest end of the completed diamond drill holes.

Hole 85-11 intersected the best results of the holes so far completed in the zone, assaying 64.47 oz. silver/t and 0.149 oz. gold/t across 2.58 ft. or 33.55 oz. silver/t and 0.078 oz. gold/t across 5.0 ft.

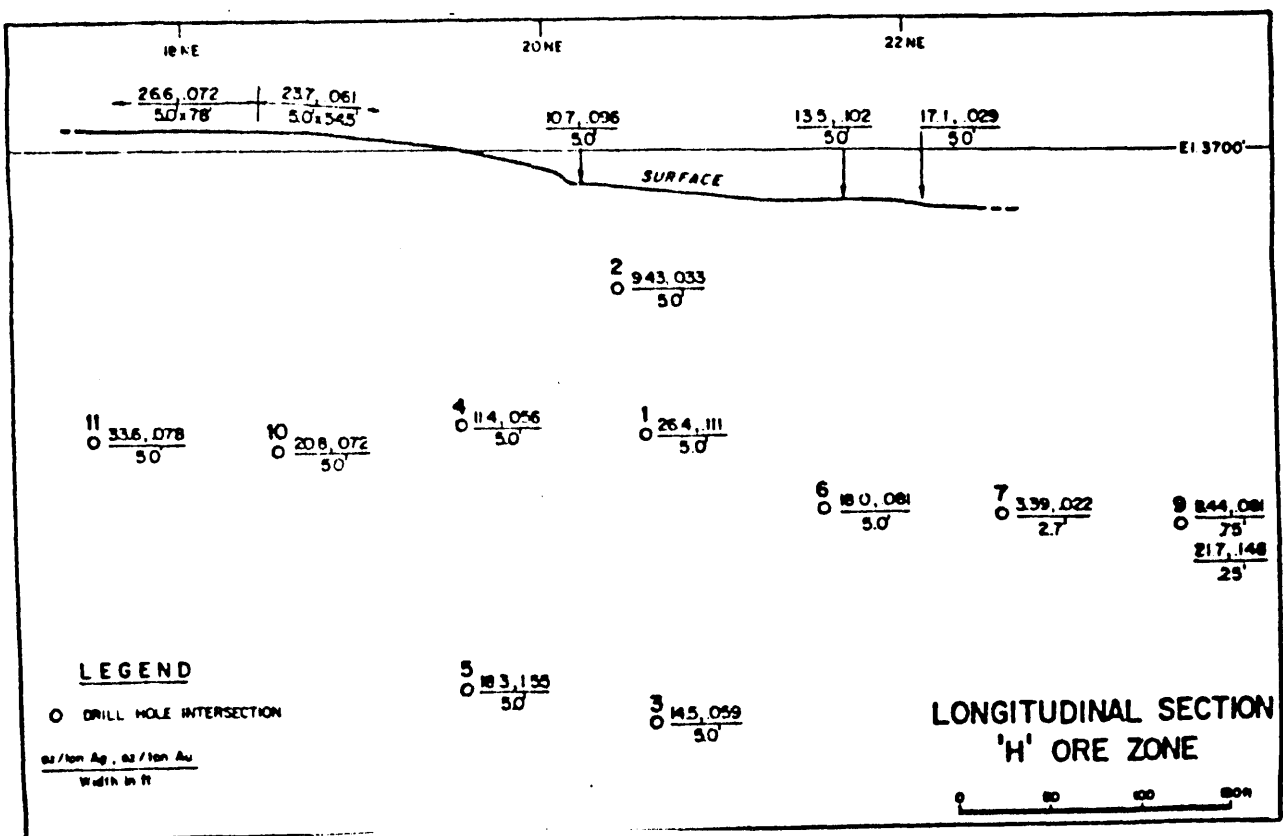

The deposit has been traced for 500 feet strike length and 300 ft. down dip by drilling and averages 20 oz. silver/t and 0.08 oz. gold/t across an average minimum mining width of 5.0 ft.

The deposit is in a strong and continuously mineralized shear zone and with the zone open along strike and to depth the potential exists for a dramatic increase in tonnage and contained ounces of silver.

GOL #133 11 JULY 1985

BRIDGE (03252011)

VISCOUNT RESOURCES LTD. (VIS-V, VISRF-Nasdaq) SKYLARK RESOURCES LTD. (SKR-V)

FURTHER FIFTEEN DRILL HOLE PROGRAM PLANNED TO - Charles N. O'Sullivan, B.Sc., president of Viscount Resources
EXTEND 'H' SILVER-GOLD ORE ZONE AT GREENWOOD, B.C. Ltd. has reviewed recent drill hole assays from the H silver-gold
ore zone on the OB and Skylark claims located one mile east of
Greenwood, B.C. (SEE TABLE OF ASSAYS OVERLEAF AS WELL AS A LONGITUDINAL SECTION OF THE INTERSECTIONS)

One anomalous soil sample value taken along the edge of the road was trenched to expose a surface showing. The mineralization is now continuously exposed over a 450-foot length. A detailed magnetometer survey was completed in November 1984. This survey indicates that the zone could have a strike length in excess of 1,000 feet. The 11 holes tested this surface showing to a depth of 300 feet and across an average width of 5 feet. The vein strikes north 15 degrees east, dips at 50 degrees, and appears, from the drilling, to be strengthening to the southwest. Native silver has been observed in a number of holes. In addition, surface assays have ranged as high as 501.7 oz. silver/t and 0.93 oz. gold/t.

The deposit is in a strong and continuously mineralized fault and, with the zone open in both directions along strike and to depth, the potential exists for a dramatic increase in tonnage and contained ounces of silver, the president stated.

Three separate ore reserve calculations have returned estimates ranging from 50,000 to 70,000 tons with an average grade of 20.19 oz. silver per ton, 0.08 oz. gold/t, containing approximately 2,000,000 oz. of recoverable silver. Preliminary work suggests that this ore could be mined by open cut, and shipped to a near by concentrator for processing at a considerable profit and low capital costs.

The work to date suggests that the bulk of the discovery is on the OB claims owned 100% by Viscount with an option to earn a 50% working interest in the claims held by Skylark Resources. To exercise this option, Skylark must spend \$100,000 on exploration by July 1986, about 50% of which has been spent. Skylark also paid \$10,000 property payment to Viscount.

A second target on the Viscount property has been located in three trenches in the east portion of the claims along a magnetometer anomaly. One of these trenches yielded a 2-foot wide sample assaying 40.05 oz. silver/t.

Viscount is in the process of completing a best efforts offering of 300,000 shares through Jones Gable & Co. The offering is expected to provide approximately \$250,000 which will bring the free working capital position to about \$200,000 after retiring current bank loans. Issued shares would then be 3,428,132.

During the year ended Feb. 28, 1985, the company received oil and gas revenue of \$148,213 which is forecast to increase to in excess of \$300,000 in the current fiscal year. This will permit the company to operate at a modest profit during the period.

 16 MAY 1985
 Skylark Resources and Viscount Resources report the following results from their joint venture in Greenwood, B.C.: hole 85-10 intersected 3.1 ft. grading 33.67 oz. silver and 0.11 oz. gold per ton or 5.1 ft. grading 20.78 oz. silver and 0.07 oz. gold per ton and hole 85-11 intersected 2.6 ft. grading 64.46 oz. silver and 0.15 oz. gold per ton or 5.25 ft. grading 31.95 oz. silver and 0.08 oz. gold per ton.

NMINER 7 MARCH 1985

Skylark property near Greenwood is interesting

Skylark Resources says it's made an interesting silver-gold discovery about two miles west of the old Phoenix mine near Greenwood, B.C., which at the turn of the century was the largest copper producer in the British Commonwealth. 225/28
08250
011

The discovery, which has been tested by three drill holes, occurs on the southern edge of the Billy Fraction, part of Viscount Resources' O.B. claim. Skylark can earn a 50% working interest for a work expenditure of \$100,000, and a small cash payment.

Company spokesman Herbert Shear tells The Northern Miner the find was the result of geochem work, noting there is often heavy overburden in the area. Last year, three hole intercepts averaged 29.58 oz. silver and 0.119 oz. gold per ton over an average width of 2.8 ft.

The zone occurs in a strong fault structure, he adds, and the company concludes much wider intercepts could be found with additional drilling.

The zone is open in both directions, along strike and down dip; a continuously mineralized fault zone hosted by granodiorite and exposed by trenching has been outlined for a distance of 325 ft. on surface. It's almost totally oxidized, and some leaching is thought to have taken place, Mr. Shear notes.

On surface, the full length of the zone averages 18.86 oz. silver, and 0.081 oz. gold over an average width of 4.0 ft. The hanging wall carries minor values next to the vein and several subsidiary silver-bearing veinlets occur up to 100 ft. away, he says. Including a portion of the hanging wall, the zone averages 9.5 oz. silver across 8.4 ft. over its full known length.

A detailed magnetometer survey completed last November indicated the zone could have a strike length of 1,000 ft. Silver is the predominant metal and they expect about 2% combined zinc-lead along with the precious metals.

GENL #67 4 APRIL 1985

VISCOUNT RESOURCES LTD. (VIS-V, VISRF-Nasdaq)

DIAMOND DRILLING HAS RESUMED AT GREENWOOD, B.C. - Viscount Resources Ltd. has been advised by Skylark Resources Ltd.

82E/2E (082E5011) that the second phase of a diamond drilling program has started on Viscount's O.B. claim located near Greenwood, B.C. SKYLARK RESOURCES LTD. (SKR-V) has an option to earn a 50% interest in the property.

A significant silver-gold deposit was discovered at the north boundary of the O.B. claim by a diamond drilling program during November, 1984. Three diamond drill holes were completed and all intersected the zone. The deepest intersection was 290 ft. down dip from surface. The three intersections average 29.58 oz/ton silver and 0.119 oz. ton gold, across an average width of 2.8 ft. Averaging the surface values across the higher grade portion with the drill results gives 23.27 oz/ton silver and 0.097 oz/ton gold across 3.4 ft. This calculates out to 596,000 ounces of silver.

Because the zone occurs in a strong fault structure, management believes that much wider intercepts may occur with continued drilling. With the zone open in both directions along strike and down dip, the potential exists for a dramatic increase in tonnage.

NMIMER 1 NOV 1984
 Skylark to drill
 Greenwood property

82E/2E
 (082E/2E 011)

Skylark Resources will drill at least two holes on its Skylark gold property near Greenwood, B.C. this November to test a mineralized fault zone which has been exposed by trenching.

Last July the company reported that 11 samples taken along the exposed 325 ft. zone averaged 5.79 oz. silver across a width of 8.7 ft. A grid will be established over a number of other showings and detailed geophysics is planned for these areas.

Skylark has a 100% interest in the property with Powergem Resources holding a 5% net profits interest.

Skylark also has the right to earn a 50% interest in the adjoining OB claim from Viscount Resources. Sufficient funds are on hand for the program, the company claims.

CON L #230 SKYLARK RESOURCES LTD. (SKR-V) 29 NOV 1984 VISCOUNT RESOURCES LTD. (VIS-V) (082E/2E 011) 82E/2E

Hole No	Intercept	Length	Distance Down Dip	Oz. Silver/T	Oz. Gold/T
SKR-84-2	100-105 feet	5.0 feet	60 feet	9.43	0.033
SKR-84-1	186'10.5"-195'9"	8.875	135	15.26	0.064
SKR-84-3	348'6"-355'8"	6.17	290	9.77	0.030
of which the averaged results on the higher grade zone are:					
SKR-84-2	100'-102'	2.0	60	23.37	0.076
SKR-84-1	189'10.5"-192'9"	2.875	135	44.75	0.191

ASSAYS REPORTED FROM GREENWOOD AREA DRILLING
 All assay results have been received from Skylark Resources Ltd.'s diamond drilling of 3 holes along the same section on the Skylark group and OB claim, 2 km east of Greenwood, B.C. Skylark can earn 50% interest in

the OB claim which is owned by Viscount Resources Ltd. Averaged results across the mineralized zone, including the lower grade wall rocks, are shown in the table and include previously published assays from hole SKR-84-1. Skylark president H.H. Shear, P.Eng., and Viscount president Charles N. O'Sullivan report that recovery from 350'6" to 352' in Hole No.3 was 16.7%. This section assayed 25.5 oz. silver/t and 0.085 oz. gold/t and was used to calculate the above average section. Cave material recovered from this section in succeeding runs assayed 42.54 oz. silver and 0.235 oz. gold/t. It is probable that any higher grade material from this mineralized fault zone was ground and lost.

In addition, several small parallel zones were intersected up to 85 feet into the hanging wall. Values ranged up to 3.99 oz. silver/t and 0.033 oz. gold/t for half a foot. The main core of mineralization is associated with a strong fault zone and is open to depth. The low grade mineralization up to 85 feet into the hanging wall suggests that this is a strong mineralizing system. The zone has been traced on surface by trenching for 325 feet and is open in both directions.

GCNL #144 26 JULY 1984 SKYLARK RESOURCES LTD. (SKR-V) 82E/2E (082E5E011)
GREENWOOD, B.C. AND - Skylark Resources Ltd. has entered into a second agreement with Viscount Resources Ltd. to earn HEMLO DEALS OUTLINED a 50% interest in Viscount's OB claim. The terms are similar to those of the first agreement dropped in 1983. Skylark will spend \$100,000 over a 2 year period on the OB claim and pay \$10,000, \$3,000 of which was paid on signing, to earn its interest. The OB claim adjoins on the south the Skylark group of claims located near Greenwood, B.C.

A back hoe trenching program completed in June and July, 1984, has disclosed a silver bearing zone which has been exposed for 325 feet on the south edge of the claim block near its border with the OB claim. Eleven samples taken along the zone average 5.79 oz. silver/ton across an average width of 8.7 feet. The highest sample assayed 26.77 oz. silver/ton across 3.2 feet and the lowest ran 0.17 oz. silver/ton across 4.3 feet. The zone is open on strike.

Skylark has acquired an option to purchase 14 claims located in the Hemlo area of Ontario from R.J. McGowan.

GCNL #153 VISCOUNT RESOURCES LTD. (VIS-V) 9 AUG 1984 82E/2E (082E5E011) SKYLARK RESOURCES LTD. (SKR-V)
EXPLORATION UNDERWAY ON - Viscount Resources Ltd. has entered a second agreement with Skylark Resources Ltd. on GREENWOOD, B.C. SILVER PROSPECT Viscount's O.B. claims in Greenwood, B.C. Skylark will pay Viscount \$10,000 cash and spend \$100,000 on exploration over the next two years to earn a 50% interest in the property.

A back hoe trenching program completed in June and July, 1984, has disclosed a silver bearing zone which has been exposed for 325 feet on the north boundary of the O.B. claims. Eleven samples taken along the zone average 5.79 oz. silver/ton across an average width of 8.7 feet. The highest sample assayed 26.77 oz. silver/ton across 3.2 feet and the lowest ran 0.17 oz. silver/ton across 4.3 feet. The zone is open on strike.

GCNL #200 17 OCT 1984 SKYLARK RESOURCES LTD. (SKR-V)
DRILL PROGRAM TO START - Skylark Resources Ltd. will carry out a diamond drilling program of at least two holes on its well-mineralized fault zone exposed by trenching in 10 to 20 feet of overburden during a geochemical follow-up. This fault zone has been sampled and gave values in gold and silver, with some values in the hanging wall. These values range from 2.61 oz./ton silver and 0.014 oz./ton gold to 27.0 oz./ton silver and 0.260 oz. ton gold. Eleven samples taken along the exposed 325 foot long zone averaged 5.79 oz./ton silver across an average width of 8.7 feet. The drilling is expected to start 1Nov84. Detailed geophysical surveys to trace the zone on strike are planned. Skylark owns 100% of the Skylark property and Powergem Resources Corporation has a 5% net profit interest in the claims. Skylark Resources has acquired the right to earn 50% interest in the adjoining OB claim from Viscount Resources Ltd. Skylark Resources has funds on hand to carry out work. Robert McGowan has been appointed a director.

GCNL #206 25 OCT 1984 VISCOUNT RESOURCES LTD. (VIS-V) SKYLARK RESOURCES LTD. 82E/2E (082E5E011)
SILVER PROSPECT IS TO BE DRILLED SOON NEAR GREENWOOD - Charles N.O. Sullivan, president of Viscount Resources Ltd., announces that a diamond drilling program will start by 1Nov84 along the north boundary of its OB claims near Greenwood B.C. Viscount recently granted an option to Skylark Resources Ltd. to earn 50% interest in the property by paying Viscount \$10,000 cash and spending \$100,000 on the property.

A back hoe trenching program completed in June and July 1984, exposed a silver-bearing zone for 325 feet on the north boundary of the OB claims. Eleven samples taken along the zone average 5.79 oz. silver/ton across an average width of 8.7 feet. The highest sample assayed 26.77 oz. silver/ton across 3.2 feet and the lowest ran 0.17 across 4.3 feet. The zone is open on strike.
