

Figure 4.—Sheep Creek Gold Mines and Kootenay Belle Gold Mines. Section across formations along strike of Queen vein (Sheep Creek) and A vein (Kootenay Belle).
(For key to formation symbols, see page 175).

Key to Formation Symbols, Figures 1-5

- BA**—Basal argillites of Motherlode series. Generally green weathering, schistose argillites.
- MLQ**—Motherlode quartzites. Massive, generally white, brittle quartzites.
- NA**—Nugget argillites of the Nugget series. Dark, generally schistose argillites.
- NQ**—Massive to thin-bedded white and grey quartzites of the Nugget series. Generally brittle but contain occasional narrow bands of softer limy and argillaceous sediments.
- RAQ**—Generally schistose argillites, with numerous interbeds of dark to white quartzites. Form basal member of Reno series.
- RQ**—Dark to white quartzites. Brittle. Form core of Reno series.
- RA**—Schistose to massive argillites, forming upper member of Reno series.
- PO**—Pend d'Orcille series of sediments, made up of limy argillites and dark, occasionally mar-marized, limestones.
