

- LEGEND**
- Structural Symbols**
- Strike and Dip of bedding (reliable observation)
 - - - Strike and Dip of bedding (unreliable observation)
 - Strike and Dip of vertical bedding
 - ⊙ Horizontal bedding
 - Nearly horizontal bedding
 - ↗ Strike and Dip of overturned bedding
 - ↖ Strike and Dip of definite foliation
 - ↗↖ Strike and Dip of foliation or bedding — not definite whether bedding or foliation
 - ↗↖ Anticlinal axis, showing direction and amount of plunge
 - ↖↗ Overturned anticlinal axis, showing direction and amount of plunge
 - ↗↖ Synclinal axis, showing direction and amount of plunge
 - ↖↗ Overturned synclinal axis, showing direction and amount of plunge
 - ~~~~~ Structural or fault breccia zone
 - Shear zone
 - Fault, observed, showing dip of fault plane, downthrow side and direction of movement
 - Fault, inferred
 - Dragfold
 - Jointing fracture dip
 - Strike of linear structure showing direction and angle of plunge
 - Lamprophyre dike, with to scale
 - Acid dike, with descriptive symbol
 - Geological boundary, defined
 - Geological boundary, approximate
 - Geological boundary, inferred
 - Outcrop boundary, defined
 - Outcrop boundary, inferred

- Rock Types**
- Limestone
 - Dolomite
 - Argillite
 - hornfels
 - Tactite
 - Quartzite
 - Chert or fine grained quartzite
 - Schist
 - Granite
 - Apite
 - Lamprophyre
 - Skarn
 - Quartz
 - Purple-green hornfels
 - Limestone-dolomite breccia
 - Biotite schist
 - Infraformational conglomerate dolomite only
 - Mica schist
 - Schistose argillite
 - Quartzitic limestone
 - Amphibolitic or gneissitic argillite
 - Radiolar-fine weathering limestone
 - Boulders

- LITHOLOGICAL UNITS**
- Black argillite
 - Dolomite
 - Argillaceous limestone
 - Dolomite
 - Black argillite
 - Dolomite, hornfels, tactite, and argillite
 - Limestone
 - Schist, argillite, hornfels, and a little limestone
 - Spotted biotite schist, some limestone (?)
 - Limestone, dolomite schist and argillite

GEOLOGICAL MAP
AMCO GROUP
SHEEP CREEK, B.C.

Scale: 1" = 300'
