PROPERTY FILE

25	Green Phyllite	Watery green, platy	1000'+
24	Carbonaceous argillite siltstone minor dark ls.	Dark grey to black ~~ha~~ locally schistose	1000+
23	Silica rock	White to gray to black, thinly banded very hard fine + dense	200' @ #2
22	Dolomite	Whispy black banding in white dol	100'±
21	Marble ± gry mica schist usually near bot	Coarse to medium xtalline ls schist band usually @ base	20' @ #2 5' @ No 5 10' @ #7
20	Dolomite	Dark w/ whispy ~~th~~ banded lt dol.	
19	Marble	Not always present.	2-5' @ #2
18	Green schist with lenses of marble up to 1' thick.	Coarsely foliated 2" wave lengths muscovite schist	25' @ #2
17	Dolomite	Buff weathering blue on fresh surface locally silty, locally marble	10'
16	Micaceous quartzite	Pure quartzite near top.	15-25'
15	Dolomite		8-20'
14	Micaceous quartzite	Thin bedded. "rather pure qtzite"	2-5'
13	Dolomite		20'
12	Micaceous qtzite	More schistose than other members of this group. Irregularly flecked with 1/16" dk brown bi porph.	
11	Dolomite	Bluish color	50' @ #6.
10	Micaceous quartzite	Gray to brownish gray to bluish gray	40-50' Cgone

PROPERTY FILE

9	Black argillite or phyllite ± ls.	Locally developed at base of micaceous quartzite above dark chocolate brown to black phyllitic argillite ± ls.	20'?
8	Dolomite	Dominantly blue, buttle + ~~intensely~~ fractured.	45' near #6
7	Marble	Micaceous.	15' S of #6
6	Schist dark green to black	Very distinct member, finely laminated. 2-3' marble at base locally.	10'
5	Qtz - mica schist ± ls	Red weathering + lt porphs similar to QMS below but porphs more consistent and coarse	70'
4	Marble with silvery buff schistose partings	Lowest consistent limestone.	40' ±
3	Quartz mica schist biotite bearing	Red weathering, mainly a muscovite schist less lt porph than QMS above.	30-70'
2	Quartzite	Very minor limey matter.	
1	Hamill (Zoning) Quartzite		1090' +
