PROPERTIES

MAR GOLD RESOURCES LTD.

Ashlu River, 28 miles north-west of Squamish, B.C. Good to excellent results from recent drilling on this gold-silver property.

82K/4W
(002KSW067)

Mountain Meadows property in the Tillicum gold camp. Six diamond drill holes proved up a gold bearing strike length of 400 feet. The company has recently optioned a further two reverted Crown grant claims in the discovery area.

ICE, YALAKUM
906/14W

On Vancouver Island Mar-Gold has a 100% interest in five copper-lead-zinc-silver mineral claims with an estimated 83,916 tonnes a reserves adjacent to its JAF claims.

82E/ The company has an option to purchase the Brown #1 and #7 claims in the re-vitalized Greenwood B.C. area.

Mar-Gold continues its policy of seeking new acquisitions and is currently looking at several promising situations.

Copies of Mar-Gold's 1983 Annual Report may be obtained by contacting the Company.

DRILLING ON HIGH GRADE GOLD CLAIMS HAS STARTED - F. Marehard, president, reports that Mar-Gold Resources Ltd. are conducting a diamond drill program on the Ice & Yalakum claims situated by the Ashlu River, 23 miles NW of Squamish, B.C., with the object of outlining a heavily mineralized quartz vein running through the intrusive country rock. Marehard says, "Collected surface samples have been assayed averaging 4.50 oz. per ton gold and 3.25 oz. per ton silver. The drilling is to be to a maximum depth of 50 feet using a 30 core size."

On another gold property, their Mountain Meadow property located in the Tillicum gold camp, near Nakusp, B.C., an extensive exploration program will be initiated. Special interest will be placed on the Crown grant Mountain Chief claim which is located within the Esperanza-La Teko discovery area.

CORES FROM FIRST HOLES NOW IN FOR ASSAYING - RESULTS EXPECTED ABOUT OCT. 15, 1982 MOUNTAIN MEADOWS - Fred Marehard, president of Mar-Gold Resources Ltd. has reported diamond drill of 5 holes has been completed and the No. 6 hole is now drilling on the property of the company which is located adjoining to the claims under exploration by LaTeko Resources Ltd. and Esperanza Explorations Ltd. The first five holes have tested a zone of pyrite and arsenopyrite which is exposed in a trench from which in 1981 the prospector shipped 200 tons assaying 0.721 oz. gold per ton. Holes No. 1 and No. 2 were from the same location but at different angles and cut the zone at 260 and 360 feet below surface. Cores from these two holes have been logged as similar to the material exposed in the trench and have been split and submitted to assay. Results are expected to be available about Oct. 15, 1982.

No. 3 holes is 100 feet NE of No. 1 and No. 2, while No. 4 is 100 feet further and No. 5 200 feet further to the northeast. No. 6 is 300 ft. NE of No. 5 and 600 ft. NE of No. 1.

FOR THE RECORD

Mar-Gold Resources Ltd. president F. Marehard has reported the company has acquired the Mountain Meadows property in the Tillicum Mountain gold area near Nakusp, B.C. The claims, adjoin David Minerals and in the immediate vicinity of the La Teko and Esperanza properties. The property was explored several years ago by Brenda Mines and this work located several drill targets which are yet to be tested.

START OF DIAMOND DRILL TESTING ANNOUNCED ON TILLICUM CLAIMS - Fred Marehard, president of Mar-Gold Resources Ltd. has reported that Drilcor Industries Ltd. has moved a diamond drill rig on the the Mar-Gold claims in the area of the LaTeko Resources Ltd.-Esperanza Explorations Ltd. gold discovery. The machine will use NQ core to test a series of targets developed by Brenda Mines over the past few years of exploration but never tested. The first hole was scheduled to start drilling September 21, 1982. (See map overleaf for property location.)

MOUNTAIN MEADOW

Brican Resources Ltd. has located two claims in the Tillicum Mountain district, south of Nakusp in SE B.C. The claims cover more than 1500 acres.

Brian Fagan, president, says these claims were located on the basis of a geological setting similar to that of the La Teko - Esperanza gold discovery. Brican has completed preliminary prospecting and a geochemical reconnaissance survey and is awaiting analytical results.

GCNL #200 19 OCT 82 MAR-GOLD RESOURCES LTD.

82K/4W 082KSW067

ASSAYING CONTINUES - Drillcor Industries have now completed No.6 hole on the Mountain Meadows gold claims of Mar-Gold Resources Ltd. in the Tillicum Mountain area (see map overleaf page 2). The exploration program on these claims sought to delineate a zone of pyrite and arsenopyrite by drilling. Holes No.1 and No.2, which were drilled to 260 feet and 360 feet below the surface, were angled and, although not showing by themselves significant values of gold, will be evaluated in conjunction with holes 3,4, 5 and 6. These later holes were spaced 100 to 300 feet apart.

MOUNTAIN MEADOWS

In reporting this, president F. Marehard says that over the next two weeks A.C.M.E. Laboratories are expected to have these assay results available.

Meanwhile, ongoing surface exploration has yielded overall positive indications of a large silver, lead, zinc showing in the south side of the claims adjoining David Minerals and a large porphyry molybdenum-copper showing in the northeast claims section.

Elsewhere, in Frio county, Texas, testing continues on the Morales No.1 well which was successfully drilled past the Austin Chalk to the Buda zone. Fracturing of the well was completed Oct.15/82, so results will be known shortly.

GCNL #224 23 NOV 82

82K/4W 082KSW067

Brican Resources Ltd. has determined there is a conflict of title on its newly acquired mineral claims in the Tillicum district, 25 miles south of Nakusp, B.C.

This problem resulted from an overstaking by Brican of a pre-existing but unredorded mineral claim. Brican does not intend to contest the title to these claims and, therefore, does not now hold any ground in the Tillicum district.
