	COPPER-ZINC MINERALIZATION.

A detailed geological cross-section diagram showing a series of tilted rock layers dipping to the right. The layers are labeled with numbers 1 through 15. A prominent fault line is shown on the left, with a dashed line indicating the fault surface. The layers are labeled with numbers 1 through 15, with some numbers appearing on both sides of the fault. The diagram is a hand-drawn sketch, likely from a field notebook.
