

005050

July 7/81

Thanksgiving Prospect (W)

Northair/Andorex
Proj managers

line cut ~ 112 km cut

short IP

some soil/silt

Some mapping

IP 50-55 ms chargeability anom
700' wide
(graphitic mat'l)

Trenching -

Drill holes

1st 3 show W has flat dip

1 - 250'

most 200 - 250'

arg siltstns / carbonaceous mat'l

Broad open antiform?

E-W plunge

gentle E plunge

calc unit

Scheelite

graphitic fingers

calc silicate
+ dirty ~~last~~

garnet skarn

Photos

Creek Showing

- several

OK on road with

X cutting peg dykes

layering 125/50SW

crumple axes ~ 100/10

under W zone are arg lot of
calc ssr

A thin garnet skarn under that

"ORE" silic pyrho scheelite
unit - not carbonaceous
- bedding controlled?

Scheelite is apparently
stratabound

Program - continue drilling for
at least another 1000'

IP EM16 Mag Prospecting
& mapping

250' ± bulk channel sample
17% WO_3

grades in drilling look st better

* SIMONY said that Blue River
carbonatites are in Horsethief
rocks.

Brown stratabry replays

~~#~~
spa (some pelitic amphibolite)

Middle Marble

Upper Clastic - + Mas. Sulph

It
