

D.D.H. 8

Casing

Black felsitic hornblendite, slightly fractured with low disseminated sulphides, some patchy 5% sulphides

Olivine gabbro, medium-grained low disseminated sulphides and magnetite

Olivine gabbro, patchy aplitic alteration

Black felsitic hornblendite, patchy aplitic alteration rare sulphides, some patchy low chalcopyrite mineralization

%Cu

0.2
0.5
0.2

Same as above, 0-5% sulphides, percentage of chalcopyrite greater than normal, low native copper

AVERAGE OVER 15' = 0.3 %

Augite gabbro, coarse-grained

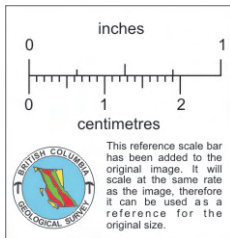

BOTTOM OF HOLE = 176'
