

LEGEND

- porphyritic (feldspar) volcanic rock
- volcanics (basalt, andesite, trap, felsite)
- skarn, highly metamorphosed
- garnetized zone
- copper mineralization
- limestone
- outcrop boundary
- contact
- trench
- attitude of beds
- + x + self potential anomaly
- diamond drill hole

contour interval is 25 feet

NOTE
 Geology on contoured area done by
 Cowichan Copper Co. Ltd.
 Additional geology done by Northwestern
 Explorations Ltd., in June, 1954.
 Diamond drill hole locations and grid
 taken from C.M. & S. Co. Ltd. map of
 July, 1919.
