A JUNIOR EXPLORATION  
COMPANY WITH  
SIGNIFICANT JOINT  
VENTURE PROSPECTS.

A SPECULATIVE  
OPPORTUNITY  
FOCUSED FOR  
GROWTH.

VSE SYMBOL  
**DOI**

bearing hematite ore, averaging 0.126oz/ton gold,  
over 35,000 proven gold ounces.

The deposit is located on southern Vancouver  
Island.

Past drilling of over 90 holes has delineated the gold  
resource that is hosted within a limestone  
formation.

Consulting geologists surmise that additional ore  
may be found at depth as well the deposit is open  
along strike.

Doromin plans to undertake an aggressive  
exploration program of drilling additional holes  
along strike and to depth as well as test mining up  
to 10,000 tonnes of ore to net the company as  
much as 3,000 ounces of gold. Doromin is  
awaiting approval of permits to commence the  
work.

The geology of the deposit suggests a volcanogenic  
origin to the ore and ore hosting zone, suggesting  
the possibility of a nearby volcanic centre.

The potential size of the deposit is unlimited.

## CORPORATE INFORMATION

Shares fully diluted: 7.8 million.

Standard & Poors Blue Sky listing.

12G Exemption number 82-2566.

### Directors:

Efrem Specogna.

George Beck, P.Eng.

Luca DiBenedetto, PhD.

Marino Specogna.

### Further Information Contact:

#### Doromin Resources Ltd.

827 West Pender Street  
Vancouver, B.C. V6C3G8

1-800-830-8006

Doromin Resources Ltd. shares trade on  
the Vancouver Stock Exchange.

### Research Coverage:

Pacific International Securities- Vancouver.

Rodman & Renshaw- London, U.K., Chicago.

CIBC Wood Gundy- Toronto.

One of numerous ore  
lenses at the Falls Zone.

This zone measures over  
3.0 metres in width at  
bottom of photo and  
over 20.0 metres in  
upper area.

The distinct oxidized  
colour of the ore can be  
seen from a distance by  
helicopter.

This zone assays over  
11.2% Zinc, 3.8% Lead,  
0.02oz/ton Gold.

**DOROMIN** is a junior exploration company listed on the Vancouver Stock Exchange with three potentially substantive prospects:

-Successful Toronto Stock Exchange gold-base metals miner Westmin Resources Limited exploring Doromin's gold-base metals Dragon project.

-Toronto Stock Exchange gold explorer Misty Mountain Gold exploring Doromin's gold prospect within the Harmony Gold Project.

-Doromin's 100% owned gold prospect with 35,000 proven gold ounces to date.

Management is committed to develop Doromin into a successful miner by advancing wholly owned and joint ventured projects to developed mines.

Management has successfully sourced prime exploration prospects since the late 1960's, company President, Efram Specogna, was honoured as the 1990 Prospector of the Year by the highly regarded British Columbia and Yukon Chamber of Mines for his excellence in mineral exploration and ore deposit discoveries.

His most notable discovery being the 3.0 million ounce gold deposit known as the Specogna Deposit located on the Queen Charlotte Islands, B.C., remains western Canada's largest gold deposit.

Doromin's three prospects, each being individually explored by separate entities, offer significant potential for the discovery and development of large tonnage, multi-billion dollar deposits.

Doromin is focused for growth.

## THE DRAGON

Westmin is earning a direct 60% interest in the Dragon prospect, located on Vancouver Island, B.C., Canada, by making cash payments and exploration expenditures.

Westmin is successfully mining, 65 kilometres away at Myra Falls, a similar gold-base metals deposit generating over US\$120.0 million in revenue annually and valued at over US\$2.0 billion. This Myra Falls has produced well over US\$2.0 billion in ore the past twenty years.

Westmin Geologists and mine Geologists have confirmed the Myra Falls favourable ore hosting geological formations and ore zones occur on the Dragon prospect over a larger surface area than at the Myra falls mining operation.

Drilling of three geological exploratory holes on the Dragon in October and November of 1995 has confirmed that the favourable ore hosting geological formations extend to depth on the Dragon.

In addition, the drilling confirmed the existence of extensive alteration associated with huge gold-base metals deposits.

The prospect hosts various gold-base metals exposures within the favourable geological formations.

These exposures are very significant in size and in economic metal content.

The Falls zone, large enough to be visible from a distance from a helicopter, has yielded values of over 11.2% Zinc, 3.8% lead, and 0.02oz/ton gold. The widths of the ore zones range from over 3.0 metres to over 20.0 metres.

The Dragon showing hosts ore that assays over 14.5% zinc, 5.8% lead, 0.56oz/ton gold. This showing occurs within a favourable ore-hosting felsic formation that covers an area, of 100 feet in elevation difference, up from the Dragon showing, to over 1,500 feet in an easterly direction. This area of the formation is dominated by disseminated zinc and lead minerals averaging up to 5.0% combined lead-zinc.

Westmin is committed to undertake a plan of systematic testing of all the favourable ore-hosting stratigraphy on the property. The first set of three drill holes were located approximately 2.5 kilometres south of the Dragon gold-base metals showings.

The next phase of exploration will focus on the immediate area of the Dragon showings, the eastern sections of the prospect and the surface mapped and now drill confirmed section in the area of the three drill holes.

Westmin management have featured the Dragon prominently within Westmin's Annual Report as well as within a research report by Wood Gundy where it is stated "Exploration potential at the Dragon property near Myra Falls provides good opportunities for future expansion." of Westmin's mining operations.

Westmin management has stated "The favourable ore-hosting geological stratigraphy exposed on the Dragon occurs over a larger surface area than at Westmin's Myra Falls mining property. The confirmed extension of the strata to depth in the Norgate Creek area offers significant potential for a large tonnage massive sulphide deposit on the Dragon. This vast area will require numerous exploratory drill holes to test the favourable stratigraphy."

Westmin's target for the Dragon would be a deposit valued at over US\$1.0 billion, as the favourable stratigraphy occurs over a larger surface area than at the Myra Falls mining operation, it is conceivable that a larger deposit may be present on the Dragon.

## MISTY MOUNTAIN EXPLORING

Misty Mountain Gold Ltd. is earning a 75% interest in Doromin's claims on the Queen Charlotte Islands, B.C., Canada, that cover favourable gold bearing formations and specific ore controlling faults.

Misty Mountain owns the Specogna Deposit which has proven reserves of over 3.0 million ounces of gold. This deposit is controlled by a fault which runs through the Doromin property.

Misty is currently drilling 56 holes to prove higher grade ore on the Specogna Deposit, with drilling of some holes off of the deposit, perhaps on Doromin ground, to attempt to delineate further gold reserves.

## DOROMIN GOLD PROSPECT

Doromin owns 100% of a gold deposit of 275,000 tonnes of surface exposed and near surface gold
