

Nootka (+ Sitka or Golden Alice claims)
- south side of Big Baldy Mtn.

Grant Crookes - prospector, Calgary - (403) 273-9461

- 40 units staked to cover showing visible from road
- sulphides + magnetite in limestone.
- Au up to 0.11 o/t
- Ag up to 4.8 o/t
- Zn up to 4.75%
- Dave Cawood looked at for Westmin - samples to be analyzed.
- would like visit and advice.

Grant Crookes, Dave Fletcher - office visit - Nov. 9/90

- specimens of semi-massive pyrrhotite with minor cpy + coarse euhedral py.
- quartz gangue - no carbonate - minor coarse black chlorite
- some specs. contain patches of brecciated + silicified, pale brown, limestone or chert.
- showing on very steep face - difficult to get to + to sample - have built ladders.
- says "structure" dips @ 45° - describes wall rock of basalt and limestone
- suspect same situation as at June (Adola) - shear zone in Kamutsea, silicified + mineralized with base + precious metals.
- can visit by contacting Dave ~~Fletcher~~ Fletcher in Camp. R.
