

PROPERTY FILE

1997:

TAY: DALMATION RESOURCES LTD. Dan McIsaac 250-423-3680 or 250-423-3680; and Al Burgoyne 250-656-3950** also Ian Lyn 604-322-4873. Riverside Motel, Port Alberni 250-724-9916 (evenings).

- Private placement of \$50,000 for work at Tay, near Sproat Lake (CS6Jan).
- Company will buy Nora and Abraham claims to west of existing claims from Frank Milakovich. Portions of claims have potential for porphyry copper mineralization. Burgoyne Consulting say 34 anomalies of targets to pursue, 27 high priority. Budget of \$157,000 established. Work to start immediately. (CS27Jan).
- Nora & Abraham claims valued at \$45,000 to \$50,000 (CS28Jan)
- Three phase program planned. Mapping, prospecting/soils, IP geophysics for expenditure of \$158,000. First phase under way. First phase funds in place. Emphasis on stockworks up on hill rather than vein in the valley. Two good targets, others so so. (AL Burgoyne 8May).
- Company will purchase Nora and Abraham Claims from Frank Milakovich GC16Jun.
- 50 sqkm electromagnetic survey in 1996. Ground followup now completed, grid soils done and preparing for 8km IP geophysics. Proposal for 5,000 ft of drilling. Private placement of \$45,000 to fund "initial cost of" phase 2. CS3Jul./GCNL17Jul
- Grid lines established and soils taken on anomalies. Anomaly E15 is a skarn which gave Cu value of 1.16%. Plan for 8 line km of IP. 5,000 ft of drilling proposed. CS31Jul.
- Drill program going ahead early in September. Aburgoyne (8Aug).
- Plans to start 2-3 week drill program around middle of September. Al will call. 3Sept.
- Completed grid mapping, soil surveys and geophysics over several targets. Completed 7 lkm of induced polarization on two principal targets. G-1; area of old drilling. Gold arsenic in soils associated quartz carbonate alteration in a NW trending structures. Work suggests additional targets todrill. E-1 is 1.5 km to southeast of above. Zone 400 x 150 metres trends WNW. Drill program started 12 Sept. 12 holes for aggregate 1,550 metres. May also drill G-3 area, near Highway and old Apex vein. Total 2 holes for 1000 metres. CS17Sept.
- NOW for 1500 metres of drilling. 12 sites along Doran Lake Road with holes to depth of 100 to 175 metres. 22Aug.
- NOW for drilling 2 holes for total depth of 1500 meters near the main road above the powerhouse. 18Aug.
- Drilled near road. Now moved up high to drill geophysical targets. AB 1Oct.
- Tay property 189 Units. Tay, Morning veins strike NE/SW & dip steep NW, probably splays of the main Ursus/Sproat fault (strikes 290 degrees, northeast side up). Note a secondary fault set runs 320 degrees. Tay vein 270 m length, 2.84 m wide contains 145,000 tons grading 0.063 o/t from 6,827 metres drilled in 61 holes. Irregular gold distribution associated with pyrite and arseno in quartz vein and late quartz cemented brittle breccia (angular fragments of passive altered basalt and granodiorite cemented by silica). Note alteration removes Si,Al, Alkalis. Sulphur probably mops up Fe as pyrite.

Rest carbonate/sericite, minor fuchsite. Morning vein similar, less explored. Apex vein trends E/W, uphill. Intense carbonate zone with similar silica core. Needs more work.

Knob area at top of hill east of Doran Lake. Some past drilling in to quartz carbonate stockwork vein. 2 NW trending faults in area. Large gold soil geochem anomaly. IP, VLF, anomalies. coincident with G-1 airborne anomaly 600m x 2500m. Three holes drilled near junction roads 510 and 510E. Note reduced carbonate alteration. Chlorites still fresh. Intense carbonate (minor quartz) and CARBON deposition in shears and veins. Rare pyrite, haematite, quartz carbonate veins. E-1 is second target on switchback lower down hill. 400 m x 150 m. EM anomaly could be precious or basemetal sulphide (?). Plans two holes. Two holes drilled near hydro plant to test area where faults come together. Not well sited. Small area of carbonate alteration and later quartz veins by the side of the road. Planned phase one expenditure \$157,000. Drilling extra. (Visit with Ian Lyn).

- 80,000 unit private placement at \$0.25 provides \$20,000 for drill program. CS28Oct.

- Drilled 7 holes for an aggregate depth of 977 metres. Plans for one more 300 metre hole Ian Lyn 15Nov.

- Plans for geophysical and geological work on western portion of claims in 1998. Private placement worth \$280,000. CS 26Nov.

- Visit from Dan McIssac and investors. Dec2nd

- Located Apex vein, trench samples contain gold, with copper, lead, zinc. Structure appears open. Plans to drill. CS3Dec.GC5Dec.

- Private placement of 120,000 shares at \$0.25 per share. CS11Dec.

- Results from drilling. One hole through Apex vein encountered siliceous breccia carrying pyrite and arsenopyrite. It ran between 0.126 and 0.143 o/t, 1.1%pb and 1.0% Zn over 1.11 metre. Looking to do more drilling on main Tay, Apex and Morning veins to build tonnage. GC16Dec.

TEX: MINVITA ENTERPRISES LTD.

- Expanded sampling program has extended length of the nickel, cobalt, arsenic soil geochem anomaly from 400 to 850 metres. Followup prospecting, mapping and geophysics planned. CS30Jul.
