1997:

ALLANA: ALBERT DORION: 250-339-2173 (951-ASPEN ROAD, RR#1. SITE 38,C32, COMOX; V9N 5N1)

- Soil survey last year. High levels of Vanadium. Two parts of property, one has mineralization in white limestone the other in basalt. Arrange for a visit in early June (May7th).
- Visited property 16 May. Copper skarn zone dips north at a shallow angle into a steep canyon wall such that the overlying volcanics, sediments and limestones cover deposit. Last year's geochem data uphill to the north don't show any sign of mineralization higher up section. Suggested mapping/prospecting a reported large disseminated/fracture controlled copper zone in volcanics southwest of the main showing. Look for a source.
- NOW for soil sampling, prospecting, geophysics (?) and seven short holes fo depth of 200 metres. 27May.
- Discovered two new areas of copper stain in volcanic rock south of river. Call for visit in August. 27May.
- John Kerr visited property and looked at new copper zones in shears in granites south of river. Doesn't see much size potential. JK 10 sept.

APEX: FRED EARL SCOTT: 604-294-9768

- NOW for prospecting on claims on east side of Harrison Lake (92H/12E) 10 April.
