IDEAL CLAIMS (Sam Craig) - SPROAT LAKE

83.07.23

- sporadic occurrences of vuggy qtz. veins (10-26 cm) wide along road running E-W just north of main highway - traceable sporadically for about 1500 metres.
- two patches of qtz.-healed breccia interlaced with thinner veins of vuggy qtz.
- never more than 2 to 3% total sulphides visible in q.v. ~ 25-33% is ep; remainder py.
- q.v. vuggy, drusy, sugary qtz. - ~~low~~ low-temperature, near surface injections
  - strike:  $85^{\circ}$ - $115^{\circ}$  Az. ; dip  $80^{\circ}$ - $60^{\circ}$  north.
- all q.v. occurrences appear to be assoc. w massive, well-jointed lamprophyre (maf. feldsp. porph.?) intrusive - main country rock is Karmutsen andes.
- Sam Craig verbally reports getting 0.33 oz/t Au & claims Falconbridge got 0.25 oz/t Au (nothing said about size or nature of samples).
- Craig reported (83.07.22) to have just made a "deal" with Falconbridge Nickel!
