## NEWS RELEASE

### BETTER RESOURCES LIMITED

For Release: June 21, 2002

Trading Symbol: BRZ-V

Contact: Cliff Rennie (250) 758 8784

**PROPERTY FILE**

Better Resources Limited has completed the first two diamond drill holes of a proposed ten hole program on the Blue Grouse property near Campbell River, BC. Both holes intersected a skarn band containing chalcopyrite and possible chalcocite. Core samples have been split and submitted for assay. Results will be announced when available. The Blue Grouse property is virtually unexplored but had 20 ton of 12% copper shipped from it in 1956 from an isolated showing in a creek gully surrounded by overburden cover.

Results from these holes will be used to plan further drilling of the skarn zone. The porphyry copper potential as suggested by the magnetometer survey and humus soil sampling has yet to be tested.

2118 Carmen Road, Nanaimo, BC
