92 HNE #032 (92 H16W) News Release

Mr. Michael Gerg reports:

Reverse circulation rotary drilling is in progress on the company's Siwash Creek property.

The assay results from the first four holes are below expectations. Minor values only were obtained in two holes. Samples from another five holes are in for assay. Visual inspection of the cuttings suggest that one of these holes may give some promising values.

Three holes remain to be drilled in the present program and this should be completed by the middle of June.
