Cogburn Magnesium Project Emory Zone Core Drilling Results

Leader Mining International Inc. (TSX.V: LMN) management is pleased to announce the successful completion of a 38-hole core-drill program on 50-meter centers at the Emory Zone. A total of 2,152 meters of drilling was completed and 758 drill core samples were analyzed. The drill-plan map, located on the Company's website www.leadermining.com, shows the drill hole collar locations (all holes were drilled vertical).

The attached results show consistently high magnesium values (> 24% Mg) that carry low impurity levels (Fe, Ca, S, B, Ni).

The drill results are now being entered into a block-modeling program in order to define a magnesium resource as part of the Cogburn Magnesium Project Production Feasibility Study.

Splits of 2.75 kilograms from each three meter NQ core sample have been prepared by ACME Analytical Laboratories Ltd. in Vancouver and continue to be shipped to Process Research ORTECH Inc. in Ontario for leach characterization and optimization testing prior to pilot testing.

The Company has retained Ernst Baer Wealth Management Service in Switzerland to arrange up to CDN \$2 million equity financing @ \$1.90 per share with one half warrant attached @ \$2.25 per share for the first 12 months and @ \$2.50 per share for the second year. A 7% finder's fee is payable on this financing. The funds will be used for general corporate purposes.
