

PROPERTY FILE

1997:

MARGIE: VERDSTONE GOLD CORP/MOLYCOR GOLD CORP:** John Fisher (531-9639)

- Murphy Mine Au,Ag,Cu acquired. Schistose Chilliwack Group volcs/seds with vein system. Recent work included soils, geol, vlf, mag and one unassayed hole. Large Au,Ag,Cu,Pb,Zn geochem anomaly with low mag, over 600 feet long and open. The unassayed hole mineralized from 389-546 feet. Plans for 2,000 of drilling. (GC23Dec96).
- 50% interest each in old property near Hope. Agreement to spend \$200,000 over two years in exploration. (GC2Jan).
- Road construction completed and drilling started. Plans to drill 600 feet in four holes to locate downdip extension of cp, py, sp, showing coincident with a mag. low CS17Feb.
- Visit on 20 Feb. Lake of Woods Motel, 10.30 am.: Mark Bonboir and Manny Amendolagine.: 1st hole 90 degrees into N20E & 50 degree NE dipping mineral zone in sheared Hozameen sed, volc and serp. All sheared & fault brecciated. Locally intense, late, silicification. One 0.3 m section of silica flooded volc? v rich in cp and po at 408ft. Higher up hole thick intercept of v silicified rock with fract and dissem. sooty pyrite plus gal, tetra??? Hole 2, 50 ft to south. Dips 50 degrees east. V similar. Note cp best in silicified volc/sed adjacent to milky bull quartz veins which are less mineralized. Possibly cp dumped, then filled up with quartz. Later fracture and addition of pyrite/gal? Last event dyking. Altered feld porph. at bottom of hole may be mineralizer. Room limited by reserve to south and dump to north.
- Assays from holes #1,2. 4ft at 0.702%Cu, 0.44 o/t Ag and 28ft at 0.524%Cu, 0.358 o/tAg in hole 1 and 6 ft at 0.270%Cu, 0.206 o/t Ag and 4 ft at 0.182%Cu, 0.077 oz/t Ag. in hole 2. No gold. (CS14March)
- 2000 ft (610metres) drilling in 13 holes. Five holes abandoned in bad ground. Copper in 7 holes with 1.03% Cu over 23 ft in 97-09. Mineral includes a small amount of Ag and a very weak trace gold (CS14Apr).

MARY-BAR F; JOHN OWEN; 604-483-9012

- NOW bedrock sampling (small pits) on a grid pattern on claim on Malaspina Peninsula. 92F15E; 23 April.
- NOC 45 rock samples collected. Analysed for Cu & Zn. July.

MELANIE: RICHARD KRIVENSKY: 250-758-4930

- NOW 200 tonne bulk sampe from site south of San Jaun River, 92C/9. 31stJan.

MERRY WIDOW: Don Graham.

- Don is interested in magnetite and bright limestone potential of the area. He may do some work this year. (pers comm. 12May).
