REFERENCE LINE

LITHOLOGY

GUICHON BATHOLITH

- Guichon qtz. diorite
- Bethlehem qtz. monzonite
- Bethlehem ? Feldspar porphyry dyke

TERTIARY COVER

- Volcanic flows — andesite — dacitic andesite
minor rhyolite
- Flow breccia — agglomerate
- Tuffaceous sandstone — siltstone — mudstone
- Lithified soil profile

ALTERATION

- P₁ — Propylitic — insipient chloritization of mafics
- P₂ —
- P₃ — Propylitic — total chloritization of mafics
(± fracture or pervasive epidote)
- A — Argillic — feldspar soft or replaced

GRAPHIC REPRESENTATION INDICATING DEGREE OF QUARTZ VEINING

- a few quartz veins
- well developed quartz stockwork
