### LEGEND

Basalt, andesite, agglomerate, breccia, vesicular lava, tuff, conglomerate.	
Porphyritic andesite.	
Felspar porphyry (epidotized red porphyritic dacite; bleached, epidotized porphyry).	
Meta-diorite.	
Undifferentiated younger quartz-diorite.	
Porphyritic younger quartz-diorite. (in part 93-P)	
Porphyritic and non-porphyritic older quartz-diorite.	
Fault or shear zone	
Joint attitude	
Flow attitude	
Attitude of geologic contact:	
inferred	
assumed	
Outcrop boundary:	
defined	
approximate	
Copper mineralization	
Strong pyritization	
Tourmalinization	
Epidotization	
Diamond-drill hole	
Trench cut	
Sample reference for thin-section study	
Contours (interval 25 feet)	
Surface area containing 0.2% copper	
Induced polarization anomaly
