W. slope of Swakum Mtn.  
(near Sophia Lake)  
Vastlode Mining Company Ltd. (N.P.L.)

For further drilling results and prospectus, please contact:

1330-510 West Hastings St., Vancouver 2, B.C. 685-6145

Vastlode Mining Company Ltd., (N.P.L.) act as principal in the sale of its shares, a speculative security.

Fin. Record, Mar 7 '66

GOOD GRADE MINERALIZATION - San Doh Mines Ltd. and Vastlode Mining Co. are equal 50-50  
 INTERSECTED UNDERGROUND partners in an exploration program on property near Tolman  
 Lake, 10 miles southeast of Merritt, B.C. The underground program  
 was started several months ago to test an area of mineralization indicated by diamond drilling  
 from the surface. Paul Polischuck, manager of the project, has reported that the adit  
 level was driven 608 feet from the portal where it intersected good grade mineralization.  
 The underground workings are being advanced by drifting along the mineralized zone.

Face samples taken by the miners across the drift width, seven feet have given the  
 following results:

608 feet from the portal-across 7 feet- 0.25 oz. silver, 0.50% copper, 1.75% lead, 5.6% zinc  
 618 feet from the portal-across 7 feet- 0.45 oz. silver, 1.55% copper, 3.85% lead, 9.0% zinc  
 628 feet from the portal-across 7 feet- 0.50 oz. silver, 0.65% copper, 5.02% lead, 7.85% zinc.

The level has been advanced about 30 feet beyond the 628 foot sample in the same  
 type of mineralization. The face presently is about 40 feet from the downward projection  
 of the No. 7 diamond drill hole which cut the zone about 60 feet above where the level  
 will open the zone. No. 7 hole cut mineralization from 90 feet to 136 feet, a 46 foot  
 distance and assayed 1.15 oz. silver, 0.22% copper, 2.70% lead and 8.07% zinc over a  
 22 foot section of the mineralization.

The second objective of the present drift is the downward projection of the No. 2  
 surface diamond drill hole which cut the mineralized zone some 300 feet ahead of the  
 present face and at a point about 80 feet above the level. No. 2 hole cut mineralization  
 from 72 feet to 101 feet with the six feet from 95 feet to 101 feet assayed 2.0 oz. silver,  
 1.0% copper, 13.47% lead, and 21.30% zinc.

The plan is to diamond drill for the full width of the mineralization at every 50 foot  
 advance along the level. G.C. Apr 3 - #15.69 out smelter values. (0.27% Ag; 0.423% Cu; 1.32% Pb; 6.48% Zn).  
 in drift.

(2) Highland Lode have optioned their lead-zinc-copper-silver property on Swakum Mt. near Merritt to Ruskin Developments Ltd. The property has proven ore reserves of 285,000 tons in No.3 Zone and 60,000 tons in No.2 Zone with combined values of 8% lead-zinc plus copper and silver. Ruskin have a crew on the property now and have an extensive program planned. The option price for this property is \$75,000 in cash to Highland Lode and the balance to \$1,000,000 out of production.
