Bute Inlet - Harman Keyser - Oct. 16/90

- showing of sheared mass. sulphides - cpy, sphal., gal. w up to 0.2 oz/ton Au in cpy.
- believed to be new showing - Keyser found it early in year while doing recce as follow up to staking north of Southgate R. ("Shumach's mine").
- did trenching - very steep, heavy % + big trees.
- forest fire came through later - reported to have burned through showing area
- will do some geochem. next week but drilling will have to wait until next year.
- showing is in siltstones assoc. with limestone + volcanics - believed to be Gambier equivalent but not shown as such on regional maps.
