Gray holocrine pyritic magnetite  
brg chl. mafic rock - metavale?  
looks ppytic on some faces

(122) White bleached pyritic fine  
plag ppy - phenos 40% vfy matrix  
(1½ - 2½ mm)

Δ 130 Bleached cream py-gr. veins  
offset by carbonate Dissemin py.

Δ 142 Ppytic phenos plag 40% ~ 2½ mm  
gray matrix

Δ 155 Vaguely ppytic - looks so because  
plag alters white, overall <sup>dk</sup> gray-green

(200) lter gray green, not so obviously  
ppytic but overall similar

(227) Dk gray green variably ppytic

σ  
258 Bleached cream but texturally  
like 227.

268 - some plg phenos to 5mm, matrix

gtzose most plg ~2mm.

- med. Gray-green color

- diss. pyrite

288 Bleached veined sericitized (flaky)

in pockets + along fr.

prob. like 268

323 Pretty well even grained, gray,

chloritized mafic

chl-py fr late carbonate fr

370 aphanitic, pinkish matrix, plg

phenos to 5mm, ~30% plg phenos

mafic → chl, dissemin py.

380 Bleached, sericitized, diss cpy, py

original rock type unsure

577 looks vaguely pyritic but depends on wt% - could be sl pyritic fg intrusive or very crowded ppy

523 like 577 but bleached cream.

625 crowded ppy, plag 50% (1 1/2 mm)  
avg - cream altn like 576  
- matrix gray -

716 pervasively sericitized  
dk grayish veined - Qtz - py out  
by gypsum.

765 fg mottled-looking, chl + mag  
metavale - gypsum

767 Veins - qtz - honey sphalerite -  
- specularite  
specularite with pyrite, talc  
cut by gypsum (orange)

800 pyrite veinlet opened up &  
infilled w. younger gypsum.  
white platy phenos (35%) in green  
(1-2 mm  $\phi$ )  
chloritized matrix.
