

FISH LAKEMISC.

74-4  
Mafics → ser + carb  
chl + sulph.

variably redld metavolc to 384 then QFP  
to 490 <sup>or varicolored</sup> grn <sup>ppytic</sup> metavolc → becomes  
gradually more crowded ppy (crowded  
ppy by 602) ... have massive zones near  
EOH. Qtz Eyes

— carbonate veins late —  
Gypsum 675 (~4230 elev)  
HON

Qtz rounded, mg, 5%

~~FS~~  
Fs Alt <sup>gray</sup>  
greenish white (local emerald grn)  
yellowish → cream

Pyrite fractures alone or with cpy, ser, chl qtz  
minor w qtz-carbo veins  
disseminated
