

Chu Chua

92P140

Ownership: International Vestor Resources Ltd.
Pacific Cassiar Ltd.
Quinterra Resources Ltd.
Minnova Inc. (optioner)

Location: South Central B.C. 80 Km north of
Kamloops.

Access: Good, road.

History to Date: Discovered 1977.
Drilled extensively 1978-79.
Recent drilling by Minnova identified
near surface pittable reserve.

Geology: "Cyprus type" volcanogenic massive
sulphides in Carboniferous pillow
basalts of Fennell Formation
Cu-Au-Co similar type to Windy Craggy
but much smaller.

Reserves: 1,043,000 tonnes pittable grading
2.97% Cu, 1.0 g/t Au.
Some room for extension. Also
underground potential and reserves.

Mine Concept: Small tonnage open pit.

Mill Concept: Ore to be trucked either to Samatosum
mill or to Afton mill.

Concerns: Economic viability.

Economics: Under consideration - Would guess very
marginal.
