M. Rept Aug/75 G. Klein - Prince George

BF/115W

* AMAX POTASH LTD.

On August 5th I visited Fred Harris, geologist in charge of Amax Exploration Company's Nithi Mountain project. Nithi Mountain is about 10 miles ESE of the Endako Mine and there are several known occurrences of molybdenum in the area. Work for the season consisted mainly of percussion drilling in the Polyanna group of claims and geological mapping in the district. Maps seen were excellent in detail and it appears that the company is making a good systematic search for mineral deposits in that area.

5 mi. S of Fraser Lake via the Chowsekut rd.

BF 1012

Lack of competition has enabled the company to put together a claim group large enough on which a systematic program can be done.
