

Bob CR. PROPERTY:

Property examined by J. Baker 1977 (Sept)

Interesting massive sulphide setting: Thick pile of varied acid volcanics with abundant pyrite (diss & str.) and sphalerite. Unexposed upper contact.

Large IP anomaly due to pyrite.

Requires comprehensive ground EM survey + geological mapping.

Attempts to option property were unsuccessful due to onerous terms demanded by vendors.

DuPont subsequently optioned ground & did some diamond drilling - results not known although probably negative.

Drilling based on EM surveys.

Mr. H.S. Eisler
Mid Mountain Mining Ltd.
506 - 540 Burrard Street
Vancouver, B.C.

Dear Harold:

The induced polarization survey of the Bob Creek massive sulfide prospect has been completed by Mauro Berretta of C.A. Ager and Associates Ltd., as recommended in our report of July 14, 1977.

A major anomaly 3500 feet long and 2800 feet wide in the centre was measured in an overburden covered area immediately southwest of the known pyrite-zinc-gold-silver mineralization. The anomaly has several outstanding characteristics:

- 1) Strength -- percent frequency effects exceed 10, with several highs up to 22; this is sharply higher than the IP response of only 5 PFE measured over the known and previously drilled mineralization,
- 2) Depth -- the top of the anomaly is within easy drilling distance of 300 feet; the bottom is not known;
- 3) Geochemistry -- the IP anomaly coincides with earlier soil geochemistry anomalies in copper, zinc, silver and lead.

We interpret the anomaly as a response from disseminated and massive pyrite lenses. We expect that such pyrite would be accompanied by significant amounts of zinc, gold and silver.

The details are such that we can identify well over a dozen drill targets. The property is located 6 miles south of Houston, B.C. and is easily accessible by road, and drilling could be undertaken at any time during the fall or winter.

You are authorized to use the above summary in a Report to Shareholders or press release, and to convey it to the Vancouver Stock Exchange or Superintendent of Brokers.

A formal report on the IP survey is in preparation by Mr. Berretta.

October 14, 1977

You may wish to know that our project supervisor, Mr. Dirk Moraal, after conferring with the Mining Recorder and Claims Inspector in Smithers, staked and recorded a 1-unit claim, the FOG claim, covering the interior fraction within the New Buck and Nabob claims (see my letter of September 19, 1977 to Mr. George C. Scott). Mr. Moraal also staked and recorded 3 units (the CLOUD claim) contiguous with the south edge of the Lorne claim.

Very truly yours

NEVIN SADLIER-BROWN GOODBRAND LTD.
