92053-06

Drawn by T.J.R. Godfrey and G.W. Monahan, 1963 and D.A. Stensides, 1964.

L E G E N D

- Quartz Feldspar Porphyry.
- "Crowded" Porphyry Dyke.
- Quartz Diorite.
- Undifferentiated Sedimentary Rocks (argillite, greywacke, conglomerate).
- Felsite (containing disseminated specularite, rare quartz phenocryst).

S Y M B O L S

- Geological Contact (defined, assumed, gradational).
- Fault.
- Shear Foliation.
- Joint.
- Bedding Attitude.
- Defined Quartz-MoS₂ Veinlet.
- Banded Vein.
- High Silica (barren quartz veinlets approximately 25 - 60% of volume).
- 1 to 5% Pyrite (as disseminated grains and/or in fractures).
- Porphyry Breccia.
- Minor Element Sample Location.
- Biotite.
- Chalcopyrite and/or "Copper" Stain.
- Molybdenum (Noted MoS₂ Mineralization in Fractures and Random Quartz Veinlets).
- Galena.
- Diamond Drill Hole (showing selected assay interval).
- Road.
- Contour Line (accuracy approximately 25' vertical and 50' horizontal).
- Intermittent Creek, Swamp.
- Picket Line.
