OFFERING

OF

UNITS

AT

\$25⁰⁰

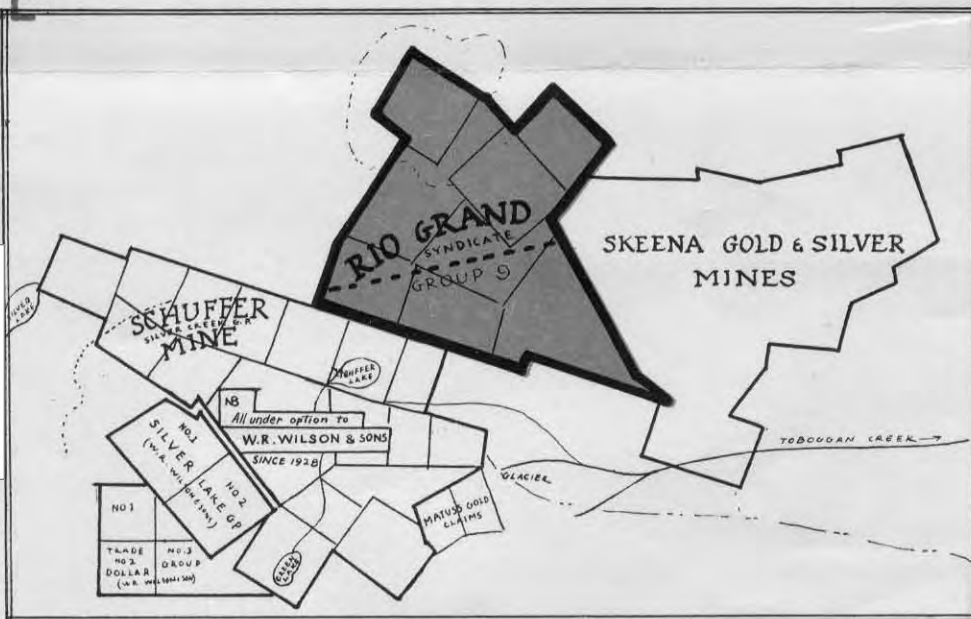

934/14W

932-103-05/07

This property was acquired personally by Mr. A. C. Garde, B.Sc., M.E., who is we venture to say, one of the best known and most highly respected Mining Engineers in the province of B. C. today.

Mr. Garde for the past 10 years has been a prominent member of the B. C. Chamber of Mines and his ability in his profession is freely acknowledged wherever mining men meet.

He is retaining a considerable interest in the property and is devoting his entire time to the supervision of development operations at the Rio Grande.

SYNDICATE STRUCTURE

CAPITAL:

Two Thousand (2000) Units.
Eight Hundred (800) Units plus Fourteen Thousand Five Hundred Dollars (\$14,500) to be paid for the property. These Units are in escrow.
Seven Hundred (700) Units to be sold at Twenty-five Dollars (\$25.00) per Unit. Five Hundred (500) Units or the balance in treasury.

COMMITTEE OF MANAGEMENT

Mr. H. Akerman, Railway Clerk.
Mr. A. C. Garde, B.Sc., M.E.,
Registered Mining Engineer.
Member of B. C. Chamber of Mines,

Mr. R. F. Gallagher, Accountant.
Mr. U. J. LaBelle, Cost Accountant.
Mr. J. R. Chalmers, Broker.

TRUSTEES

THE LONDON WESTERN TRUSTS LTD.

PROPERTIES:

Twelve mineral claims and fractions thereof situated in the Omineca District, near Smithers, B.C.
The group covers 360 acres with five distinct mineral deposits.
Applications for crown-grants have been filed and accepted.

TRANSPORTATION:

It is possible to drive over good roads from Vancouver to within two miles of the actual workings of the property, which is within five miles of the Canadian National Railway which makes transportation of supplies possible at a very small cost.

GEOLOGY:

The Rio Grande lode represents a mineralized zone of altered sedimentaries in contact with a granodiorite core and actual underground development work on Hudson Bay Mountain has demonstrated that the ore attains the highest values at the very contact points. The major vein which has been explored by several short cross-cutting tunnels gives values ranging from \$9.60 to \$45.60 per ton in gold and from 3.60 to 28.48 ozs. in silver.

The Rio Grande vein which is the major gold showing on the property varies in width from 10 to 20 feet and is well defined for a length of more than 3000 feet. As the ore is of arseno-pyrite nature it is anticipated that it will be possible to get great depth on the vein.

PROPOSED DEVELOPMENT:

The present development campaign calls for an immediate diamond drilling program by which it will be possible to explore the vein matter at depth at the minimum cost as soon as this is completed and the results prove satisfactory a main haulage tunnel will be started at a lower elevation to intersect the proven area at depth.

GENERAL REMARKS:

An abundance of timber and water power is available either on or immediately adjacent to the Rio Grande property.

It is possible, due to the elevation of the property, to get tremendous depths with comparatively short tunnel length and as the formation is a massive one the cost of mining should be low.

It is expected that the present program of work will prove the property to be a mine by September of this year.

A prominent engineer in the person of Mr. A. C. Garde, B.Sc., M.E., will devote his entire time to the supervision of all work. Thus Unit holders are assured of efficiency in operation.
