Harrison et al

mentyn in Volc bx in greens in folded Telkwa fm

Qtz + cream carbonates + 10% sulphides (veinlets, clots)
sphalerite ep py galena arseno
(dk red brn → black)

Possibly high Au with high Zn.

Sulphides fractured w gold in fractures in pyrite

Pyrite earliest?
Coed 18-20% Ag

* some ser is green but is NOT fuchsite

Altn bleaching →
ser cal → ser Qtz carb → Qtz antlerite
more foliated

Reserves 210 000 tonnes @ 15.79m / T Au + 80 gm / T Ag

Correspondence/Notes

Forks Showing

90000T @ 19g/T Au

shallow NE dip

- 86-90% gold recovery is feasible w med fine grind
