old V/G workings  
" " "

7060  
7060N/15

mainly subaqueous  
locally sheared

pyrobitumen pyrro sparry calcite

seeds - ch tuffaceous relict v eyes fossils

'hyolite' is a logging term - not proven yet

FW marker - highly vesiculated

Stake 4700' down dip 800'  
S Central + N zones

ULF

S zone - refractory ore attachment / wartzites etc  
miche baute musc gypsum carbon  
central zone -

spher py repl by stibnite tetrahed.  
cut by arsenopy

Realgar foliated  
Musc/stibnite schist

Central zone

VTA sections  
CR Mudstone  
sphal gal boamnite boulangente

stratigraphy similar to S zone  
min/zn ~ bedding || ; sulphides show grading  
slump structures locally

N zone

Host rx the same

Zn Pb

sheared zone X's or  
silicified, mineralized

cpy py gal → mylonite (foliated)  
sphal

silicified bx

silic FW with sphal + py
