Ownership: Sulphurets Gold Corp. 30%
Western Canadian Mining Corp. 70%
Placer Dome Inc. (Has 74% of
Sulphurets)

Location: Remote, North Western B.C. near
Sulphurets, approximately 60 Km
north of Stewart.

Access: Very difficult - Air only - High
elevation.

History to Date: Drilled by Western Canadian in
1987, 1988 and Placer Dome in 1989.
Fairly wide spaced drill holes.

Geology: Porphyry type Cu-Au deposit with very
extensive quartz-pyrite-sericite
alteration. Hosted in Lower Jurassic
flows and pyroclastic rocks of Unuk
River Formation (Hazelton Group).
Controls to mineralization not well
understood.

Reserves: Geological reserves 60 million tonnes
at 0.86% Cu and 0.342 g/t Au at a 0.3%
Cu cut off.
Open on strike and down dip.

Mine Concept: Open Pit?

Mill Concept: Open Pit?

Concerns: Location, road access, AMD.

Economics: Unknown.
