

- SYMBOLS**
- Tractor road
 - Bulldozer trench
 - Fault (defined, inferred)
 - Linear
 - Fracture zone
 - Dyke - dioritic (di), syenitic (sy)
 - greenstone or andesite
 - Camp / Helipoint
 - Stratigraphic section, location number
 - Topographic relief - (1) strong, good rock exposure on upper slopes
 - " (2) moderate, poor rock exposure
 - Copper occurrence, location number - in place
 - " " debris, probable local origin
 - Anomalous copper in soil

- LEGEND**
- INTRUSIVE** - diorite mainly, includes basic phases.
 - HORNFELS** - hydrated volcanics mainly, includes felspathic hybrids, feldspar porphyry, dykes, irregular bodies of syenitic to dioritic composition.
 - VOLCANIC** - undivided - pyroclastics mainly, intercalated andesite flows.
- B RED UNIT** - tuff, breccia, andesite.
- Ba** Volcanic breccia - pale grey matrix, green, purple fragments.
 - Ba** Flow breccia - dark green.
 - Ba** Andesite, amygdaloidal - light brown / red.
 - Ba** Andesite, massive - mainly light brown / red.
 - Ba** Tuff, shale - dark red / purple.
 - Ba** Volcanic breccia - brick, dark red / purple matrix, fragments.
- A GREEN UNIT** - andesite, massive dull green, interbedded felspathic breccia.

SECTION

Thickness (approx)	
① Tuff, breccia (Red Unit) - Top Andesite, green massive Felspathic breccia Andesite, green, massive	100' (10' - 50' (?)
② Volcanic breccia, grey - Top Andesite, massive Flow breccia, copper mineralization Andesite, amygdaloidal, copper mineralization Andesite, massive, base not exposed Tuff, silty	50' 50' 25' 75'
③ Volcanic breccia, grey - Top Andesite, brown & green, copper mineralization at base Volcanic breccia, dark red	200'
④ Flow breccia (?) - Top Andesite, amygdaloidal, copper mineralization Andesite, massive, copper mineralization Andesite massive	50' 50'
