## CANADIAN UNITED MINERALS, INC. (CUN-V)

EXTENSION DRILL HOLES REPORTED - Roger McClay, president has reported Canadian United Minerals has negotiated, subject to regulatory approvals, a flow-through private placement of 1,250,000 shares at 20¢ each for proceeds of \$250,000.

Canadian United Minerals holds a 33.3% interest in the Dome Mountain project, 25 miles east of Smithers, B.C., where diamond drilling has demonstrated the easterly extension of the Boulder zone. TEESHIN RESOURCES LTD. (TEE-V) holds 66.6% and Total Energold Corp. a 15% net profits interest. Hole D 89-5 intersected the zone 1,000 feet east of the present zone and assayed 0.63 oz.gold/t, 3.895 oz.silver/t across one meter. Hole D 89-6 intersected the zone 800 feet east of the present zone and assayed 1.7 oz.gold/t, 9.31 oz.silver/t across 1.5 meters.

A second mineralized zone has been encountered that parallels the easterly extension of the main zone. Hole No. D 89-1 cut this parallel vein grading 0.113 oz. gold/t, 3.33 oz.silver/t across 1.07 meters. In total six holes have been drilled to verify the extension of the strike length of the ore body.

Of eight holes drilled to depth below the westerly end of the Boulder zone No. D 89-8 assayed 0.47 oz.gold/t, 2.87 oz.silver/t over 4 meters.
