INTERNATIONAL SKYLINE GOLD CORPORATION SKYLINE GOLD CORP. [SKX-T,V]

-Continued From Page 1-

The Iskut River claims of 22,000 acres, 150 miles northwest of Stewart, in northwest B.C., including three immediate targets:

- Stonehouse deposit extensions where there are 16 gold-bearing veins with current drill indicated reserves of 40,000 oz. gold of 0.6 oz/t, in 66,000 tons. Including three recent 40-pound samples from a sub-level on the Zephrin vein assaying 1.798; 1.007 and 0.635 oz. gold/t. The vein was mined on a limited basis and is considered to have a good potential for the development of new reserves;

- Bronson Creek gold, copper, molybdenum, silver porphyry which is 3 km long by 0.5 km wide, representing 4,000,000 tons per vertical meter;

- SMC/Craig River project of 5,859 acres contains gold mineralized semi-massive sulphide which was previously under option to Adrian Resources, and is 500 meters south of the Snip mine and is underlain by the same Triassic volcanic sediment host. Exploration has located: eight mineralized areas; 15 significant gold/silver or base metal soil anomalies; 10 moderate horizontal loop electromagnetic conductors and seven low-frequency electromagnetic conductors. The highest surface grade mineralization in trenches is 0.119 oz/gold/ton, 1.14oz.silver/t, 2.06% lead, 5.15% zinc over 15.5 meters. Drilling demonstrated consistency of gold grade. Drill hole No.91-40, in a 14-meter intersection assayed 0.113 oz/t gold, 0.94 oz. silver/t, 0.13% copper, 0.17% lead, 5.74% zinc. These intervals are flanked by thicker, lower grade zones;

Exploration on the Johnny Mountain Mine and the Bronson Creek porphyry on the Iskut River property in northern B.C. will commence in May.
