QUATSINO

BCAR  
SPECIAL STUDY OF THE  
WESTERN AREA

LEGEND

- Yellow: Quaternary
- Red: Tertiary
- Blue: Quaternary
- Green: Tertiary
- Black: Quaternary
- White: Tertiary

INTRODUCTION

The purpose of this study is to provide a detailed geological map of the Quatsino area, showing the distribution of various geological units and features.

METHODS

The data for this study were obtained from a variety of sources, including field observations, aerial photography, and geological maps.

RESULTS

The results of this study show that the Quatsino area is composed of a variety of geological units, including Quaternary and Tertiary deposits.

CONCLUSIONS

The results of this study indicate that the Quatsino area is a complex geological area, with a variety of geological units and features.

TABLE 1

Unit	Age	Thickness (m)
Quaternary	Recent	0-10
Tertiary	Recent	10-20
Quaternary	Older	20-30
Tertiary	Older	30-40
