

# GREAT WESTERN STAR PROJECT

- 1. STAR-EUREKA:** Host - Monzonite  
Mineralization: disseminated and fracture controlled chalcopyrite, pyrite, bornite, malachite, native gold  
Alteration: intense k-feldspar, carbonate, chlorite, magnetite, specularite
- 2. ALMA N:** Host - Monzonite/Andesite Contact  
Mineralization: disseminated pyrite + chalcopyrite  
Alteration: intense k-feldspar, carbonate, chlorite, magnetite
- 3. TOUGHNUT:** Host - Intermediate Lapilli Tuff/Breccia  
Mineralization: disseminated to semi-massive pyrite, chalcopyrite, sphalerite, galena  
Alteration: intense k-feldspar, quartz, carbonate, chlorite, magnetite
- 4. RON:** Host - Monzonite  
Mineralization: disseminated and fracture controlled chalcopyrite and pyrite  
Alteration: k-feldspar, carbonate, chlorite, magnetite
- 5. GIVEOUT:** Host - Intermediate to felsic volcanic flows, breccias, Silver King Porphyry  
Mineralization: pyrite, chalcopyrite, pyrrhotite  
Alteration: Iron carbonate, sericite, quartz

**GOLD-COPPER  
MINERALIZATION**

**PACIFIC SENTINEL  
GOLD CORP.**
