Mr. John S. Brock:  
Columbia Gold Mines Ltd.,  
15th Floor, 675 W. Hastings St.  
Vancouver, B.C. V6B 1N2

Dear Mr Brock:

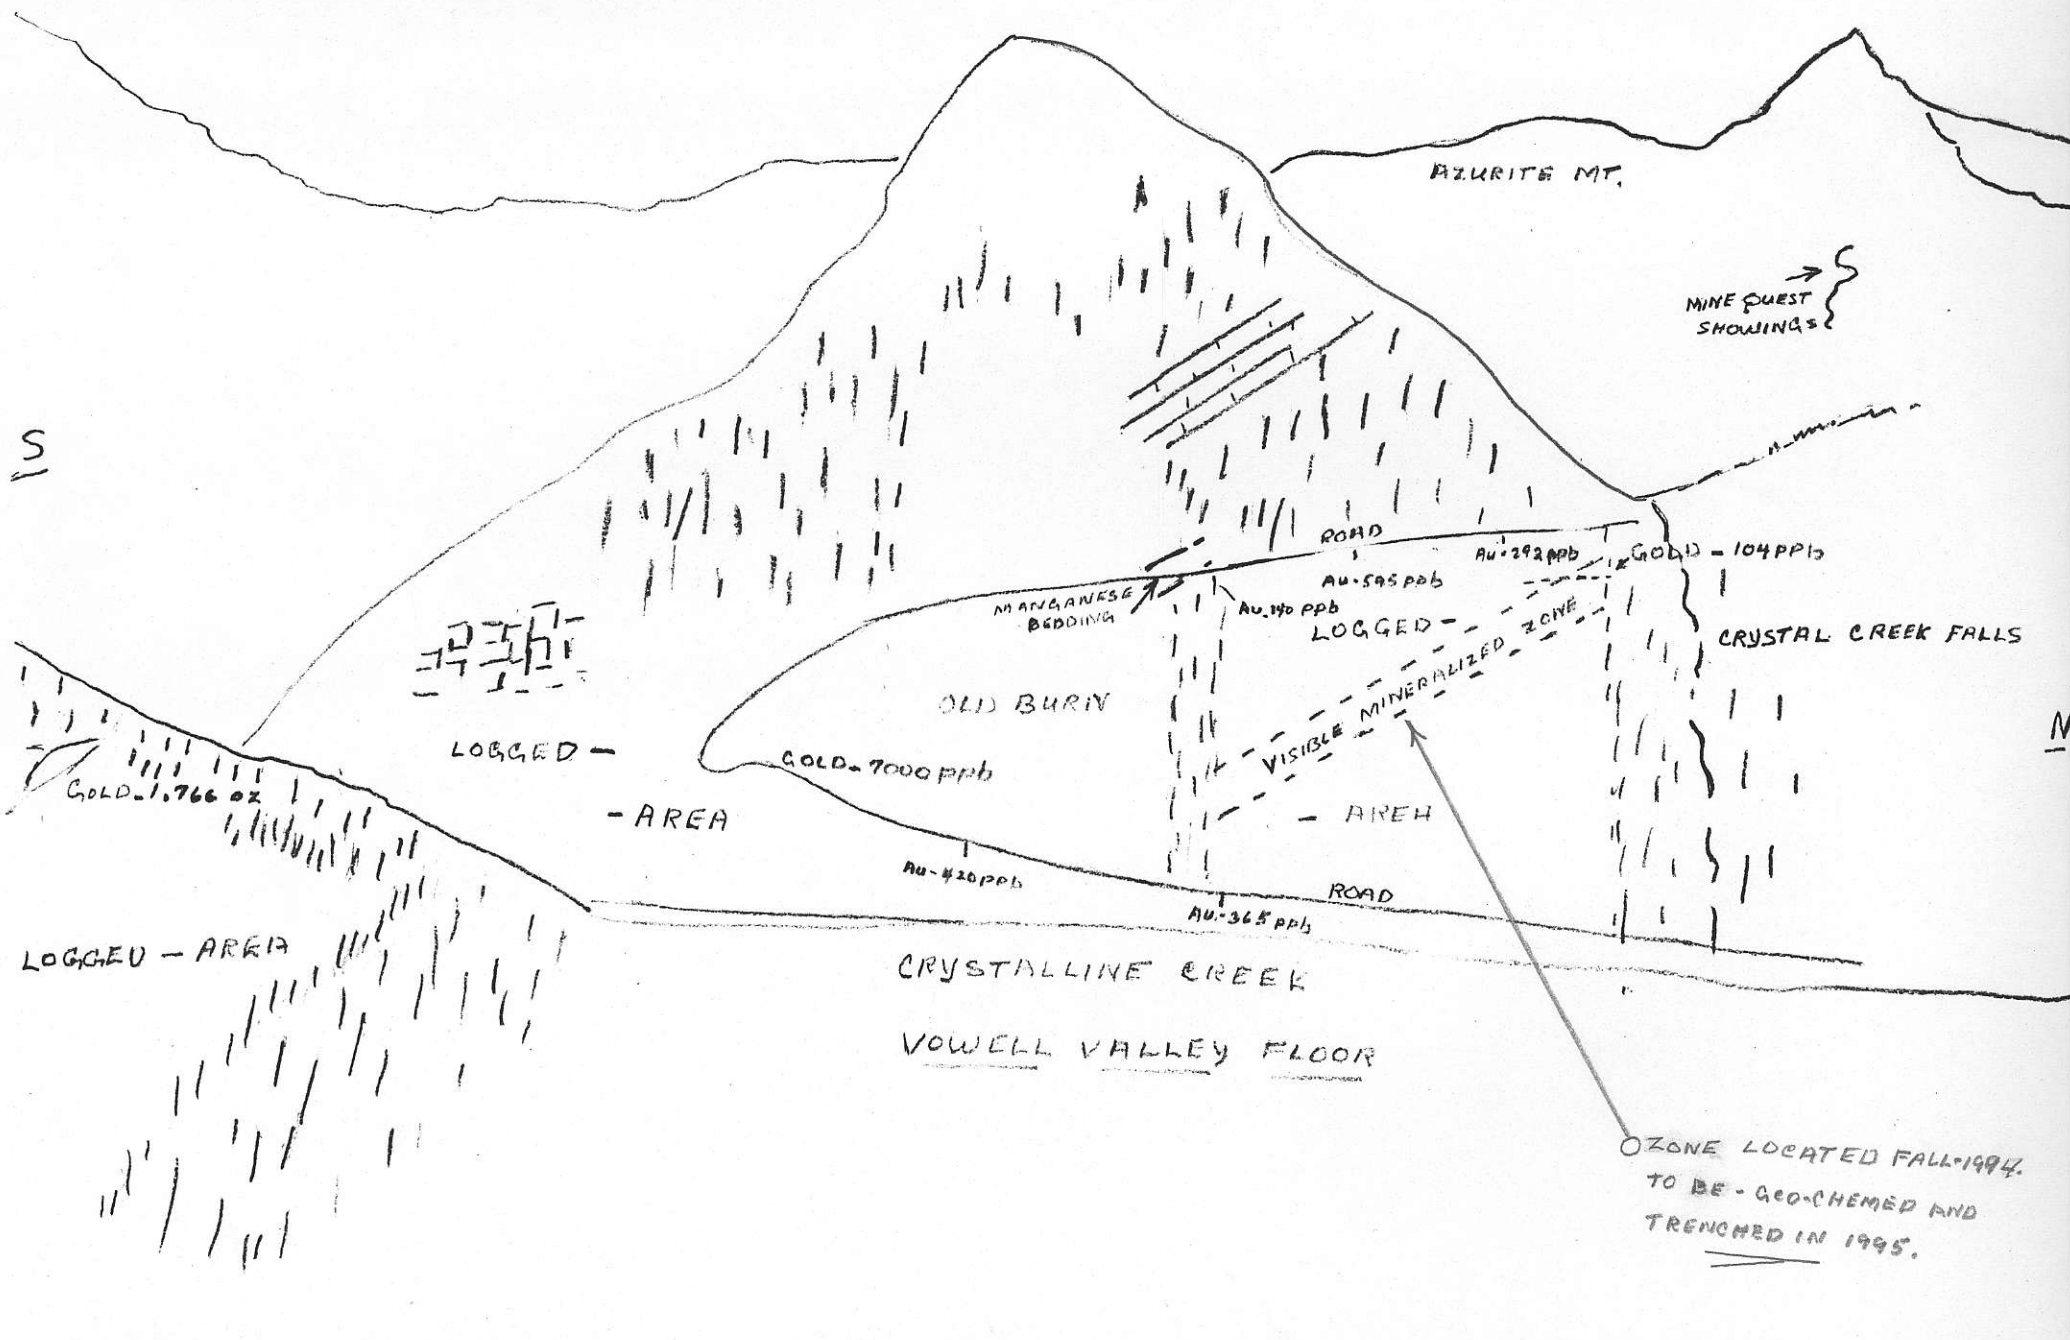

In response to your letter requesting more information on our VAD-AB claim prospect, I am sending you a number of reports from various years to give you some idea of assay reports and the area which has been geo-chemed and trenched during that period. Also find enclosed an area map where the some of the assays were taken. The claims were originally staked for lead-silver-zinc but as it became apparent that there were significant gold values in the soils more samples were assayed for gold. You will note in the reports and on the map that many samples were not assayed for gold. We have other maps etc. that would be available on request.

A new dark band which appears to be bedding and is 8 to 30 meters in width is visual cutting across a recently logged area for about 600 meters and appears to be mineralized, as two soil samples taken across its upper extremity assayed 104ppb Au. and up to 775ppm in Pb. See sketch enclosed. Geo-chem and trenching are planned for this area in the spring.

Looking forward to your comments:

Yours truly,  
James S. Adamson
